

THI-SHOW TRANSCRIPT 2023-08-10

There are lots of healing the world going on right now that doesn't require your input, other than to hold your frequency up as high as possible. There is a ground level healing ongoing that does involve yourself, in terms of purging, letting go of yourself and things that didn't serve you. Healing old traumas and wounds of you and your family line. The most important thing now is, focus. What are you focusing your energy on, is it healing for you or others? If not, it is not serving you, you are serving them. THInk different, act different and be different, as differentiating and distancing yourself from them is paramount for your own development and indeed, sanity right now. Things are falling away more rapidly now and having your wits and focus about you, will serve you well into the future. What is important in your life here and now? In the immediate future and your long-term goals will all raise their heads fairly soon in all of us. Deeper tests of your resolve are around the corner, deeper exposures of where you are at also. Have you prepared for that? Don't lie to yourself and or neglect it, as that ridiculous tactic has not served you well either. So, what happens next? Only you can decide that fate. The Universal free will choice, but can or will you choose wisely on a vessel level? Can you set free all the stigmas, dogmas, labels, belief and control structures, peer pressure competitive and comparative traits and just be a free loving and caring being you were meant to be all along? There are people dying the song line says, newsflash; people have always died unnecessarily on this planet and yet did we not just ignore it, because it wasn't in our own backyard per se. Why are Covid deaths different to the multitudes of deaths by war, settlements, droughts or famine? Healing the world starts with you.

NEWS: The harvesters of American funds under blatant false pretenses are about to get another heist of the American's funds. The US House of Representatives has narrowly passed a defense department annual budget, that includes controversial amendments on abortion and gender reassignment surgery. Some of them Generals need re-alignment of their brain cells, perhaps that needs to be included in the bill as well? The 2024 National Defense Authorization Act (NDAA) must still be passed by the Democrat-controlled Senate, which is unlikely to approve the existing bill. Democrats say Republicans have hijacked the bill and risk US national security. National Security means cover up of crimes. The \$886bn bill funds the Pentagon for one year. It also sets its policy agenda and includes a 5.2% pay raise for troops and measures to address China and Russia. Have Russia or China threatened to invade us? Then why do we need to address them? 5.2% pay rise is in essence actually not a pay rise but a pay deflation. As interest rates rose to around 9% and other items rose over 20%, 5.2% covers neither. While the passage of this defense bill is a victory for congressional conservatives, Democrats in the Senate are working on their own military spending legislation, which is unlikely to contain the House's controversial abortion and transgender provisions. This is how they play games, install controversial items into a bill to then argue for weeks or months over it. All bills should be separate items. The two chambers and the two parties will have to reconcile their differences in order for the legislation to be enacted into law. That may be a challenging task, however, as House conservatives could rebel if Republican House Speaker Kevin McCarthy makes

concessions to his political opponents. Congress successfully has passed the annual defense spending legislation for 62 straight years, a streak that will be in jeopardy unless one side backs down or both sides compromise. I hope neither pass it, until the US Military change their constitution and allow them to defend American's on their own soil. Otherwise it should be classed as a foreign entity that should not be funded by American people.

The tech takedown and push back is also now increasing as this piece proves. A class action lawsuit has been filed in the US, claiming Google has used hundreds of millions of people's data in order to feed its AI tech, including the Bard chatbot. The lawsuit was filed by eight claimants on behalf of the rest of the US population. It claims: Google has been secretly stealing everything ever created and shared on the internet by hundreds of millions of Americans, including personal and professional information, our creative and copywritten works, our photographs and even our emails, virtually the entirety of our digital footprint. The eight people who filed the suit are only represented by their initials, but details elucidated in the filing, reveal one of the plaintiffs is six years old, another 13. One of the claimants is an actor and professor, one an author, another regularly posts on YouTube and TikTok. The documents detail how the author's work can be reproduced when using Google Bard. On demand, Bard will offer not only to summarize the book in detail, chapter by chapter, but it also offers to regenerate the text of her book verbatim, the case document reads. The group is suing Google parent company Alphabet for \$5 billion. Their lead claim is publicly available, has never meant free to use for any purpose and that Google must understand, once and for all: it does not own the internet, it does not own our creative works, it does not own our expressions of our personhood, pictures of our families and children or anything else simply because we share it online. Google is attacked on 10 fronts in the case, including violations of the Digital Millennium Copyright Act, the 1998 US law that provides the mechanisms by which copyright-infringing content is removed from platforms like YouTube. Earlier this month Google updated the wording of its privacy policy to more clearly state, it does indeed implement user data in the development of its products. Google uses information to improve our services and to develop new products, features and technologies that benefit our users and the public. The old classic of we are doing it for your benefit, pull the other one Google it's got balls on. For example, we use publicly available information to help train Google's AI models, build products and features like Google Translate, Bard and Cloud AI capabilities, its policy read in early July according to Search Engine Journal, although the wording appears to have changed once again since. Now why would they change it if they were operating in the right way? Google's privacy policy still says your data is used in developing new products and features that are useful for our users. If that is the case then, they should pay for the right of use to each person's property they used. Just like the public have to pay for their services, this should never have been allowed in the first place. But then Google and Alphabet are subsidiaries of the CIA, the daily day of atonement group who seems to be able to get away with anything, including murder. All under the banner of National Security. Does anyone ever ask; who is National? Because it is certainly not the people is it? This is not the first case to be levelled at the companies developing generative AI technologies. Last January, Getty Images sued Stable Diffusion creator Stability

AI in London, claiming it had used the Getty's copyrighted pictures to train its generative AI models. This was followed up in February by a similar filing in the US. Why have they done all of this? Reason A: is their old AI system was ended B: they are incapable of running their systems without an AI C: they are voyeuristic perverts and D: complete fear. But what it also reveals is how cowardly they are, hiding in underground bunkers and darkened rooms to spy on us all.

MEDICAL NEWS: This piece will piss some people off, but it needs to be said as all the illusion games needs to be shattered. Mind memery at its worst, of convincing people to part with more money for the same product. Did you know 77% of all US adults take dietary supplements, spending almost \$60 billion a year. Is that working? No, then why take them? Jun 2016 · Americans spent \$12.8 billion out-of-pocket on natural product supplements. What a complete waste of money that is, people need to quit the fear and stop taking these placebos. The fact is, if they worked, people would be better, evidence suggests they are not given the amounts spent on pharmaceuticals. After watching the Covid scam, why would you ever bother taking their products again? Because the same pharma that made the vaccine, are the same groups making these supplements. Where is the evidence they make us better? Thousands of class action lawsuits says, they don't. People need to understand their bodies more, it tells you what you need, providing you stop buying into their programs. With pharma meds, people take the same expensive meds year after year, do they get better? No, because if they did they would not be taking the meds. All meds are a poison to our system, if you have to take them longer than a month, they don't work. You are only taking them out of fear, not because you are ill at that point. According to a report by GoodRx, which is a pharma company, why are they tracking it? You do know that Rx is a symbol of Ra, so good RX is a tribute to Ra. The U.S. organic food market reached an all-time high in 2021, surpassing \$63 billion dollars for the year, with over \$21 billion of that coming from the purchase of organic fruits and vegetables. That is based upon fear as well, why does just adding 7 letters to a product make you feel it is beneficial? Many organic foods still go through the USDA that adds the chemicals and so it is no longer "organic". But what is organic? Has it just become another mind meme? Has it successfully marketed their products to charge you more based upon fear? Initially it was a nouveau riche product, but now with the fear it has danced into the lower classes and snatched more money out of their pockets at alarming rates. The same applies to organic meats, they go to the USDA plants and they put the non-organic chemicals into them, so again it is advertised as organic, but is not. It is a heist of your purses and wallets, done by clever marketing based upon your own fears and the people fell for it again. I can't tell you what to do, but in overview, is buying these products supporting the system or the farmer? Is buying these products supporting the lies or the truth? Is buying goods based on fear, good for your development? Do you know what the greatest emotion for illness is? Fear. Quit the fear and you can get more healthy just based on that. Buy ordinary fruit and vegetables and clean them thoroughly. Learn how to transmute your food into healthy thinking. Reduce your salt, sugar and alcohol intake. Spend the money saved on taking breaks away from your stressful life and suddenly you will feel a whole lot better.

This piece could have gone in the news and the society news section, as it may not appear as a medical issue, but for the flow of the show it is in this section. Yet brain twisting or manipulation is part of our overall health. In a world where information is always at our fingertips, it can be baffling that misinformation continues to run rampant. With scientific facts so easily accessible, it should be simple to set the record straight. However, scientific research has confirmed: Facts alone aren't always enough to correct misinformation and change people's minds. Unfortunately, the way our brains store information isn't always conducive to correction. On top of that, we aren't as rational as we like to think we are, which tangles our understanding of the world in a sticky web of personal identity and emotion. We in the alt media are fully aware that the misinformation coming from the MSM has been hard to impose upon to docile masses. The key reason is; low self-worth will not allow the self to be wrong and so becomes of loop of illusion and lies, copious amounts of wasted energy defending them and the inner self stifled and weighed down with utter bullshit. Information Retention: Our brains have a remarkable ability to retain information, albeit with some quirks. Rather than replacing incorrect information, our minds tend to create new memories alongside existing ones, says Lisa Fazio, a psychology professor at Vanderbilt University. Consequently, when we try to recall a corrected piece of information, we may end up with competing ideas, one based on the original information and another incorporating the corrected details. Depending on which memory was encoded more strongly or recently, incorrect information may dominate our recollection. This phenomenon, known as the continued influence effect, helps explain why corrections, even when we readily accept them, sometimes fail to override the original misinformation. The continued influence effect is administered by politicians and media, it seems they don't like it when we correct them. Well pity about them, as we have had enough of being force fed their stories, fables and fairy tales, it's time for a reality check. Yet again accusing others of what they have done. Mental Shortcuts: Despite their incredible cognitive abilities, our brains can only process so much information at a time. Faced with complicated information, we tend to rely on mental shortcuts rather than engage in purely logical thinking. One such shortcut involves repetition. Replaying the FHSTOS bore that out to be true. Initially it was a lot to take in, but when replayed 18 months later, you had all learnt so much more and the pieces started to flow better. Research has shown that information we hear multiple times tends to stick in our minds. Which is why all news channels say the same script. Even children as young as five are more likely to believe something is true if they've heard it more than once. According to Fazio, these mental shortcuts generally work due to the finite amount of truth in the world. Well that is true, as they deny it is why. There's an infinite universe of false things and a narrower universe of true things, so most of the stuff that we hear multiple times is true. While this shortcut is useful in many cases, it can quickly become dangerous when trying to sift through frequently repeated misinformation and accurate information. This tendency to perceive something as true due to repetition, even if it lacks factual basis, is known as the illusory truth effect. The illusory truth effect becomes particularly concerning in the context of social media, where misinformation can spread rapidly. Due to this effect, false claims can gain traction and become widespread, causing confusion. It is funny they never did any articles like this when less people questioned the official narrative is it not? It becomes indicative. The influence of belief systems: Our

existing beliefs also play a big role in how we perceive and process information. New information that challenges our deeply-held beliefs can cause discomfort. So, to avoid that discomfort, our minds resist change. It's whether or not you view the information as an attack on yourself and your core beliefs. I think we're a lot quicker to dismiss any sort of correction that goes against our identities or worldviews, to the point where we don't even consider the correction. Our human tendency to closely identify with our values and our brain's love of shortcuts, can make it easy to discount reputable sources. Again that has been used by the MSM, any attacks on government or religion which are both control systems and savior programs, bring revulsion by too many. Why? because you are taking the adult children's safety net away, who will save us now they cry? You is the answer when you get off your backside and do something. It's way easier to think, that's from a source that I don't trust, I don't have to pay attention to it, rather than to actually engage with information that contradicts what you believe about yourself and the world. Well if that is the case, why are they writing pieces like this? The answer is as I stated some time back is; they are losing the narrative and people are questioning more and more now. They want everyone back in their box, literally and figuratively. Why facts don't change our minds: So, if facts aren't enough to change minds, what does work? Researchers continue to debate the best ways to correct misinformation, and outdated ideas on setting the record straight still persist. What's generally agreed is this: It's not just about the facts themselves, it's about how they're presented and the context in which they're received. While it's generally best to avoid the repetition of untruths due to the illusory truth effect, some evidence suggests that using misinformation as a scaffolding for a correction can make it more effective. You can imagine repeating a myth could be really bad, because people think it's truer later on. But there's actually some evidence saying it helps people link the correction to that existing belief and that makes it more impactful. The best way for researchers to correct misinformation is; question the official narrative as well. Then come up with a balanced piece and let the viewer decide. They are attempting to railroad all information that has not come from an official body. The great question is; when where the people asked for an official body to decide what is truth for them? Understanding emotions and values: Another way to correct misinformation may lie in exactly what makes misinformation work in the first place: emotions and values. By understanding the values that underpin someone's beliefs, we can frame corrections in a way that appeals to those values, increasing the chances of creating meaningful dialogue and potential change. The most useful thing is when you can get information from sources that they do trust, says Fazio. When you don't have that, one thing that can help is, starting by talking about shared values. Now if only politicians and media did that, talk about policies that are beneficial to the people and also how we can change things for the better. Emotions and values indeed, try telling that to the jabbed people, those that were fired for not taking a job, those that lost businesses, jobs and homes. Facts woven into stories, personal anecdotes and appeals to empathy can evoke emotions that resonate with us on a deeper level, making us more open to considering alternative viewpoints. Correcting misinformation and changing minds rarely happens through a single interaction or a barrage of angry internet comments. Patience, empathy and respectful communication are key for productive discussions that have the potential to challenge and shape beliefs over time. Just like THI has done. Yes, the truth has been brutal, but it has been handled by and large with a gentle touch. That

took into account people's emotions and values, took into account peoples delusions and belief systems and then delivered it with transcripts for clarity for people to get a grasp of it all. This is clear evidence they are losing the narrative war, no longer can they control so many with the BS agency based scripts of lies, confusion and theft.

SOCIETY SECTION: As a number of people are coming forward now who have had the sex change surgery and many are now reporting many issues with it, including mental wellbeing, sexual complications and bladder issues. Some who are young teenagers are blaming the schools for the encouragement via the gender indoctrination teachings. I can understand that to a point, but that is negating your own personal responsibility. It appears the fad of it all is wearing off and many are deeply regretting it. One male to female stated it feels like her whole life is over, I would imagine she is on suicide watch by her family. This is why we focus heavily on the programs in the Society section, it may appear harmless with political correctness, wokeness, gender indoctrination and Black lives matter, but they are deeply damaging, divisive and leads to lasting implications for many. Teaching impressionable youngster to go against their creator, is just about the lowest of the low, yet where are all the religious people up in arms over it? Where are they campaigning against it? Surely it is blasphemy against their god? Curiously, just like the church pedophilia issue, they remain silent and muted. Without scientific evidence, fringe political figures are increasingly blaming the existence of transgender people on environmental pollution, err no they are not. How to shift the narrative of the programs, to get people to focus on what they want. Why it matters: The gender-chemicals theory may embolden existing biases against an already-marginalized group, medical experts and scientists say. Details: Democratic presidential candidate Robert Kennedy Jr. claimed on a podcast last month that chemical exposures were contributing to children experiencing sexual dysphoria. That is actually correct, Mothercare in the UK were caught late last century adding gender bending chemicals in the baby formulas. But let's not just focus on the transsexual issue, our river are swimming in chemicals from these factories waste and pharma and other products being funneled into sewer systems from our own urine. Kennedy, fretted about studies of endocrine disruptors including a pesticide, atrazine, that a scientist showed could make frogs grow reproductive organs of the opposing sex. If it's doing that to frogs, there's a lot of other evidence that it's doing it to human beings as well, Kennedy told Jordan Peterson in an interview YouTube later removed. The Kennedy campaign said he misspoke when he said sexual dysphoria, he meant gender dysphoria. A medical term used to describe discomfort with differences between someone's sex assigned at birth and gender identity. How we got here: Extreme political figures in the U.S. and Europe have latched onto several iterations of these conspiracy theories since 2015, and it's gained more steam on social media and podcasts in recent years. Alex Jones for years has proffered the theory that chemicals in the environment, including atrazine, are turning frogs and humans gay. Reality check: Tyrone Hayes, the scientist who conducted the pesticide research Kennedy referenced, said he was offended by someone using his work to suggest transgender people are contaminated. Hayes said the chemical's impacts on gender identity have not been researched. Well if they have not been researched then A: how can you state something on it and B: why hasn't it been researched? Shanna Swan, an expert

on endocrine disrupting chemicals, said she doesn't rule out the potential for them having some gender impact, given the ways she's found they impact human reproduction. But Swan said any link between the chemicals and human gender is highly uncertain and that there's no evidence of a rise in trans people. Kennedy's campaign clarified in a statement that, he believes that atrazine and other endocrine-disrupting chemicals may be part of the reason for the rapid rise in the number of people identifying as transgender, but does not believe there is any definitive proof of this. Between the lines: Trans rights advocates said they see the gender-chemical rhetoric as part of a broader political war. A sudden flood of state-level efforts to restrict the medical care options and gender ID rights of trans people, is fueled by many of the Christian and conservative groups that led the charge against *Roe v. Wade*. Legislators supporting these laws have at times deployed dehumanizing rhetoric, like one Florida legislator calling trans people mutants from another planet. What they're saying: It's just people have seized upon that and turned it into a conspiracy theory to use as ammunition as part of this war against the LGBTQ community, said Mark Pitcavage, a senior research fellow at the Anti-Defamation League's Center on Extremism. Ah the Jewish based ADL chimes in again on another controversial subject, yet again these Jewish based groups are called in as experts on everything, but who made them the experts of anything? Extremism they cover, nothing more extremist and divisive than the Jewish cult-based ADL. Equality Florida press secretary Brandon Wolf said the gender-chemical rhetoric is part of a cocktail of hysteria that has aided in passing anti-LGBTQ laws. The bottom line: Chemicals may play an outsized role in everyday life, but there's no evidence they make humans transgender. Wrong thinking and pure lies, as transgenders take certain chemicals to alter their appearances, via hormone therapy. So, by basic common sense, that means chemicals do change our physiology, so why lie?

This is a refreshing change and I hope these opinions will catch on within the Jewish communities. Ilan Bloch is a licensed Israel tour guide and teacher. Ilan said, enough of the meaningless slogans and platitudes, I don't want to hear calls for Jewish unity or for *ahavat Yisrael*. I don't need to love my fellow Jew just because she is a Jew. I don't want to unify with people who support so-called price tag actions, terror attacks against the fields, cars and homes of innocent Palestinian people, just because they happen to belong to the wrong nation. I don't want to unify with people who support Jewish supremacy, would you want unity with a white supremacist, just because he was also Christian? Or American? Or white? I don't want to unify with people who think that Meir Kahane was a good man, had good ideas, or that at the very least we can learn some Torah from him. I don't want to unify with people who want to damage the rights of the LGBTQ community, African asylum-seekers, non-Orthodox Judaism and women as a whole. I don't want to unify with a man who has held this country hostage for years, only in order to escape responsibility for his alleged criminal actions. The Temple wasn't destroyed because of *sinat chinam*; it was destroyed because of zealotry. What is *sinat chinam*? The rabbis of the Talmud blamed the demise of the Temples, both the first and second ones and other Jewish tragedies on *sinat chinam*, which is Hebrew for baseless hatred. Two millennia ago, there were extremists who lacked an understanding of the limits of power, misread international geopolitics, and held twisted, distorted ideas of how best to serve God, just like the

extremists in today's government. What I do want is: leaders who will call a spade a spade, who will courageously call out immoral acts of other Jews, condemn them and attempt to root out the evil from our midst. Like Bella Freund who protected a neutralized Palestinian terrorist from being lynched by an angry mob in Jerusalem in 1992. Mickey Eitan, a former Likud MK, who likened Kahane's legislature endeavors to the Nuremberg Laws. Rabin z'l, who condemned Baruch Goldstein's massacre of innocents in Mearat HaMachpela, the Cave of the Patriarchs without stammering. During the time Kahane was an MK, every other member boycotted his speeches, including those who were fully right, were Geulah Cohen and Yitzhak Shamir anything else but fully right?! Of course not; they just had a moral compass, which is more than can be said of the alleged criminal defendant Netanyahu, who midwifed the deal which brought Otzma Yehudit, HaTzionut HaDatit, and Noam into the government. I'm done with leaders who are so scared of alienating their base, their students and congregants or the general masses that they contextualize, excuse and even understand that, the enormous pain that our perpetrator-brothers feel, must cause them to act in ways which aren't entirely appropriate. I had a nice chat with some supporters of the judicial coup on the train to Jerusalem yesterday; we parted ways at Navon Station with a handshake. This is not something exceptional. But it doesn't in any way demonstrate that we are a united people and it doesn't disprove the gravity of the situation in which we find ourselves. It's not just our leaders who can't live together, it's our people too. But still, I don't need Jewish unity, I need Jewish leadership. I need a Jewish state which will foster a society which is truly a moral exemplar. I need Israel to live up to its potential. Stirring stuff, plus he highlighted the division between the Israeli people due to hierarchical sect, which is caste driven and all very India. I am glad the Israeli people are fighting back, they need to. Because the future for them will be unpleasant, when more of the truth about Israel and it's dark past breaks through into the light.

This will be a controversial subject, as it divides opinions in many ways. THI has never shied away from the controversial subjects, particular when it runs along the lines of labels. I will try to bring balance to it and come up with some solutions. Following Ron DeSantis signing a bill ending permanent alimony leaving people divided it is stated. After a decade of clashes over the issue, Florida Governor Ron DeSantis signed a bill to overthrow the state's alimony laws, causing more controversy. CBS reported that First Wives Advocacy Group, an organization of mostly older women, said this was devastating news. Jan Killilea, 63, who founded the group a decade ago, said, on behalf of the thousands of women our group represents, we are very disappointed in the governor's decision to sign the alimony-reform bill. We believe by signing it, he has put older women in a situation that will cause financial devastation. The so-called party of family values has just contributed to the erosion of the institution of marriage in Florida. What a load of nonsense that line is, as once a couple have split, technically that is the end of that family gathering. The group which was pushing for this bill, led by Michael Buhler, said, Florida Family Fairness is pleased that the Florida Legislature and Gov. DeSantis have passed a bill, that ends permanent alimony and codifies in statute the right to retire for existing alimony payers. Anything that adds clarity and ends permanent alimony is a win for Florida families. The new law eliminates permanent alimony, restricts the

duration of alimony to a maximum of 50% of the time of the marriage, and allows for changes in alimony payments under various circumstances. Additionally, it will make it more challenging for judges to award alimony payments that surpass 25% of the payer's monthly income. In the age of equality please tell me why a man has to pay for a woman he is no longer engaged with? With equality, girl power and we can survive without the men rhetoric, surely this bill sets an opportunity and example for women, to prove that women can go on without men? But it is not that simple is it? Alimony is a blight on the many who are forced into paying for it, it is sexist and blatantly unfair. Why should a man have to pay for two families, no matter what the reason for the split is, is that fair? If a man can afford it and is willing to set aside his pay until the woman gets a job or improves her pay then fine, but that should last a maximum of 6-12 months. Why should the man be forced to adjust his life and yet the female not do so? Judges will say the female is entitled to a portion of earnings of the man, she was used to whilst in marriage, yet why should that be the case? Why is it against the male? Imagine a similar scenario, a male or female has just lost a job and they apply for other jobs and find that it is less pay. Can the male or female says to their new boss, well I was on \$X a week in the last job and you will need to pay me the same amount or more to keep up my lifestyle. See how that works, it won't and yet the man in a marriage has to? "It will make it more challenging for judges to award alimony payments that surpass 25% of the payer's monthly income." How many can afford to pay 25% of their income for a failed relationship? What happens if the man meets someone else with a family, now he is paying for two families. It is utterly bizarre and why so many relationships are failing due to bizarre, sexist court rulings dating back to the last century and beyond. No wonder so many people are living on their own, can't afford a new relationship because of their previous ones. The whole alimony laws needs to be ripped up and started again, it is damaging to many people that causes many hidden problems like anxiety, mental health issues, depression leading to alcohol and drugs abuse, not to mention the high rates of suicides amongst men. If a relationship ends a transition period of 3 months should be affordable for most males to support their former partners, after that some very stringent and more balanced judgements needs to be made in the law courts. Obviously if children are involved it becomes more complicated, but I am sure most men would if they could afford it, contribute to their children in equal measure. But funding the ex-wife or partner should end after the transition period. Mothers should only be awarded the children if they can afford to do so, again the man loses out on that narrative as well. Think for one second and ignore which label you are; if this was you and you had lost your partner, children and house, would you wish to pay for all of that, without getting any benefit? For too many women money is the be all and end all, aided and abetted by shekel based lawyers, that has to change for the benefit of women and their children. But also the protection of the traditional family model, that has come under severe attack in this lifetime, courtesy of clown level programs and the church.

EXPOSE: This expose is all about energy, climate, their fake programs and also how this like all other think tank programs are falling apart. The back tracking on another fake program continues at a pace in Europe. The Swedish Government has ditched its targets for 100% renewable energy supply, amid a shift back to nuclear power in the latest blow for the unreliable and inefficient technology. Announcing the new

policy in the Swedish Parliament, the Finance Minister Elisabeth Svantesson said: this creates the conditions for nuclear power. We need more electricity production; we need clean electricity and we need a stable energy system. Environmental campaign group Net Zero Watch has welcomed the move, saying the Swedish decision is an important step in the right direction. Implicitly acknowledging the low quality of unstable wind and solar, and is part of a general collapse of confidence in the renewable energy agenda pioneered in the Nordic countries and in Germany. Sweden remains committed to 100% fossil-free energy provision, but the change means it now sees nuclear power as critical to achieving it. Sweden can afford to reject fossil fuels, relying on nuclear and hydro and biomass, Net Zero Watch suggests. But the U.K. should go further, since in substantial industrialized economies, only a gas to nuclear pathway is viable to remain industrialized and competitive. Others have suggested that burning vast amounts of biomass i.e., wood is not really more ecologically friendly and lower-emission, than burning the much more energy-dense fuels of gas and coal. Further objections to biomass and other fossil fuel alternatives, include that lowering carbon dioxide emissions is not really a worthwhile goal for an individual country, or globally as the potential harms of the gas are uncertain and exaggerated and the benefits overlooked. Dr. John Constable, Net Zero Watch's Energy Director, said that living close to Russia focuses the mind, and the Swedish people wish to ground their economy in an energy source, nuclear, that is physically sound and secure, unlike renewables which are neither. For the time being the U.K. Government continues to live in a fantasy of its own making, but we are coming to the end of the green dream, he added. Another plan bites the dust it seems, extraordinary levels of failures by politicians, EL-ites and think tanks. There was zero thinking or structure put into this and so was bound to fail. It didn't help the increase in demand for electricity due to bitcoin mining was then hampered by idiotic politicians with no plan. Take electric cars in America for example, where are the fill up stations dotted along the highways? What happens when there is a deep snow drift or pile up, these electric cars will lose their battery and then you would need a fleet of charging vehicles just to move them. Non thinking reigns it seems.

Here is another example; It's a magical time for clean energy production. Methods like wind and solar power are leading the way, but they may soon have competition because, similar to a magician pulling a rabbit out of a hat, scientists in Australia have found a way to pull electricity out of thin air. It is not magic; it is over a hundred years old. Dr. Rhys Grinter, Ph.D. student Ashleigh Kropp, and Professor Chris Greening from the Monash University Biomedicine Discovery Institute in Melbourne, Australia and the scientific journal, Nature, published their findings. These scientists produced and analyzed a hydrogen-consuming enzyme from a common soil bacterium. The enzyme, called Huc, pulls hydrogen from the atmosphere and converts it into electricity. The Australian researchers extracted the Huc enzyme from a bacterium called *Mycobacterium smegmatis*. It turns out that many bacteria can utilize hydrogen from the atmosphere as an energy source, even in nutrient-poor environments. We've known for some time that bacteria can use the trace hydrogen in the air as a source of energy to help them grow and survive, including in Antarctic soils, volcanic craters and the deep ocean, Professor Greening said. But we didn't know how they did this until now. Not only can Huc turn trace amounts of hydrogen into electric currents,

but Kropp's work shows that purified Huc can be stored for long periods of time. It is astonishingly stable. It is possible to freeze the enzyme or heat it to 80 degrees Celsius [176 degrees Fahrenheit], and it retains its power to generate energy, Kropp said. This reflects that this enzyme helps bacteria to survive in the most extreme environments. The magical story of Huc keeps getting better, as the bacteria that produce the enzyme can be grown in large quantities, making it a very sustainable resource. While it's early in the research process, this discovery could be a significant breakthrough in clean energy. The next step is producing Huc on a large scale, and at that point, as Dr. Grinter put it, the sky is quite literally the limit for using it to produce clean energy. Good stuff, but will the shekel people stifle it?

We highlighted load shedding across the world a few months back, and indeed I got to experience it on one of my trips. Load shedding has much more impact on people's lives than not being able to cook, charge phones or make a tea or coffee. It changes people's circadian rhythms, alters their sleep patterns, which can make people feel more tired and grumpy. In essence it puts people out of balance. These are not isolated events, load shedding can be 1 to 4 times a day, ranging from a total of 2-12 hours, the disruption is enormous. The problems are two fold; A: not enough investment into the system as shareholders harvest those funds to line their own pockets, and B: people tolerate it too much. It also becomes a test center, whereby they gauge just how much they can get away with meddling with people's lives and then they adjust it accordingly and roll it out in other regions. Maybe now they are ready to launch it in America as well, as this report reveals. Blackouts are likely this summer in the United States, according to the North American Electric Reliability Corp. If it does will the company change their name to Unreliability? The NERC warning came recently, calling for shortfalls in power supplies to the U.S. West, Midwest, Texas, Southeast, New England, as well as Ontario, as temperatures rise. As temperatures rise? Of course they rise it is the summer FSS. No scare tactics when America and Canada plunged into winter early last year, was there? No scare tactics saying oh my look at the temperatures plunging. No mention of the record snowfall in many regions either, or the prolonged winter after we went basically from summer to winter last year. What happened to autumn? where was the fear porn channel ran by IBM, the Weather Channel then? nowhere. The sound of silence went on for months, because it didn't fit the agenda you see. Last year, the warnings of power blackouts were less severe, in part because they didn't include the U.S. Southeast. A combination of extreme peak demand, low wind and high outage rates from thermal generators could require system operators to use emergency procedures, up to and including temporary manual load shedding, the North American Electric Reliability Corporation said in its Summer Reliability Assessment report. Texas, in particular saw a major heat wave last summer that strained the state's electric grid, triggering a call from the state's electricity regulator, ERCOT, to consumers to conserve energy. At the time, wind turbines in Texas were operating at just 8% of their capacity. This year's full summer assessment will be published next week. The U.S. power grid is faced with other challenges that go beyond power disruptions due to extreme temperatures. The number of attacks on the U.S. power grid infrastructure with gunfire or vandalism grew last year, and it is likely to rise this year, too, according to a confidential NERC analysis seen by the Wall Street Journal earlier this year. Last year, the number of

physical attacks - including intrusion, vandalism, and gunfire - jumped by 71% from 2021, according to the Electricity Information Sharing and Analysis Center, or E-ISAC, a division of North American Electric Reliability Corporation (NERC). Notice there is no suggestions of fixing it, no investments for the future only the ridiculous, costly and unprepared so-called clean fuels. If they had wanted clean fuels, we should have gone with Tesla's ideas over a hundred years ago, except that wasn't marketable. We have a crumbling and outdated energy system because of the same greedy harvesters wanting more shekels, than actually providing a proper service.

Every summer, heat waves inevitably hit the United States and other parts of the world, causing climate alarmists and left-leaning media outlets to demand dramatic, disastrous changes to the global energy system. Unfortunately, this summer is no different. On Tuesday, U.S. media outlets published a wave of stories about supposedly historic heat waves in Europe and North America. For example, the Washington Post published an article titled; Heat waves in U.S., Europe virtually impossible without climate change, study finds. Similarly, Axios published a story titled; Historic and enduring U.S. heat wave, by the numbers. Although certain parts of the United States have undoubtedly experienced strong heat waves this summer, there's no reason to believe these weather events are evidence that the world is hurtling toward a climate change catastrophe. In fact, the best available evidence suggests that heat waves recorded a century ago were more problematic than anything we're seeing today. Oops, CNN didn't reveal that did they? Or the fact we had no autumn last year, it went from summer into a long winter. More suggestive of global cooling than warming. But then the clowns know how to manipulate the weather and remember the first weather manipulation was done in the late 1800's in China. They I believe have the ability to steer or hold the high and low pressure systems that brings sustained and extreme weather patterns. Government researchers have been tracking heat waves for more than 100 years. According to data from the U.S. Climate Change Science Program, which is made available by the Environmental Protection Agency, the annual heat wave index for the contiguous 48 states was substantially higher in the 1930s than at any point in recent years. In some years in the 1930s, it was four times greater or even more. Additionally, the National Oceanic and Atmospheric Administration (NOAA) has a large database of daily temperatures that goes back to 1948. NOAA used 1,066 weather stations located across the United States to collect this data. According to NOAA, huge swaths of the United States have experienced a significant decrease in abnormally hot days recorded since 1948, especially in the Midwest and northern and eastern Texas. Although it's true that some parts of the United States have seen the number of hotter-than-usual days increase over the past 70 years, including in California and the New York metropolitan area, both of which happen to be areas where a large number of media outlets are located, most weather stations have shown no meaningful changes or even declines. Because California and New York are built up concrete jungles, which adds 10 degrees to the temperatures. All courtesy of dick swinging high rise buildings. Meteorologist Anthony Watts, who works with me as a senior fellow at The Heartland Institute, analyzed NOAA's data in detail and found that 81% of the weather stations used in NOAA's database reported that since 1948, there has been either a decrease or no change in the number of unusually hot days. If the

available data so clearly reveals that there is no heat-wave crisis, why are media outlets suggesting the opposite is true? The answer is sloppy, irresponsible media reporting, combined with cherry-picked data. Anyone who wants to show a long-term warming or cooling trend can do so, by selectively choosing starting and ending points in datasets that will provide the answer you're looking for. For instance, if you start your examination of historic temperatures with figures collected in the 1970s, when temperatures were unusually low compared to the rest of the century, then current temperatures look abnormally high. If you start around 2010, then temperatures over the past decade appear to have dipped below normal and are only now recovering. When many media outlets and left-wing politicians talk about climate change data, they almost always selectively choose a range that offers an incomplete picture of the larger available dataset. This makes it appear as though today's temperatures are historic when they are actually well within normal historical ranges. Another problem is that media outlets have been using temperature forecasts in their news reports as if those figures were actual temperature data. A forecast is, by definition, a guess, and some alarmist analysts have recently made a bad habit of incorrectly predicting insanely high temperatures that never come to fruition. For example, the Telegraph, one of the largest papers in the United Kingdom, published an article on July 18 in which the author claimed, The European Space Agency said thermometers could tip 48C in Sardinia and Sicily, while the temperatures in Rome and Madrid could both reach the mid to high-40Cs. In drought-stricken Spain, temperatures were set to reach highs of 44C in Catalonia. None of these predictions came true. In fact, some of them were off by several degrees or more. Heat waves happen every year, but this isn't evidence that Americans are facing a global warming crisis. When heat-wave data are put into their proper historical context, it's clear that everything humans are experiencing today has been witnessed in the past. The ugly truth behind climate alarmism is that, much of it is driven by a radical ideological agenda that is seeking to transform the global economy and American society, not by science. The best way to fight back against it is to use cold, hard facts. And those facts plainly show that there is no reason to panic about our ever-changing climate. Oh, my a common sense approach to an alleged problem and indeed agenda. Things are changing and that is a positive.

Here is some more data to disprove the fear porn clowns operating under the banner of weather experts, there are none. They just spit out political ideology rhetoric, all based upon fear. These weather people in my opinion should be named and shamed in their own communities, for the damage and lies they are portraying, all to put people in fear. Do not underestimate the damage fear does to help, it renders them unable to live a free life, because once in that mode and emotion, there is always another fear around the corner to hamper or stifle their lives. The western US has had an historic winter. From record-breaking cold spells to unprecedented amounts of snow, this has been a memorable cold season and one that runs counter to the prophecies of the AGW party. Starting with the cold and according to data from the warmth-addicted NOAA, the US has set 7 all-time low temperature records so far this year through April 24 compared to just one heat record. While 321 monthly lows have fallen in April alone also through April 24 compared to 66 heat records. The highest ever April 1st snow cover recorded this year Regrading snow, in

the official books going back to 2001, the largest area ever covered with snow/ice in the western US at the beginning of April so far, was 2019's 1,030,820 sq km. But this year that figure was far exceeded, with satellite imagery showing that more than 1,149-960 sq km of the West was covered with snow and ice on 1 April. By comparison, the average snowpack in the western US at the end of March is 242,000 square miles. According to NSIDC data, snowpack this season was well above the April 1 average in all western states. South Dakota, Nebraska and Arizona lead the way with 350% of the average, followed closely by Nevada. 11 western US states have seen above-average snowfall; in fact, all have set records: Meanwhile across the pond, the official UK low of -7.4°C was recorded on April 27 in Loch Glascarnoch, Scotland. This broke the previous low of -6.1°C recorded in 1956 in Glenlivet. It's been quiet for Britain's climate alarmists, as record cold has blanketed the country.

EXPOSE: A his story based expose now, exposing the takeover of Europe long in the past, by the same self-serving clowns of the now. The Frankish Table of Nations is a brief early medieval genealogical text in Latin, giving the supposed relationship between thirteen nations descended from three brothers. Oh not the 3 brothers story again, do these people ever change the script? 13 nations became the later of version of the 13 colonies of America. The nations are; The Ostrogoths, Visigoths, Vandals, Gepids, Saxons, Burgundians, Thuringians, Lombards, Bavarians, Romans Bretons, Franks and Alamanni. The Table is called Frankish after the origin of the surviving manuscript tradition, not the origin of the work itself. In structure it is similar to the Table of Nations in the Bible. Except these are not referring to nations as countries, but races. Although it survives in over ten manuscripts, the only medieval work to make use of it was the 9th-century *Historia Brittonum*, which nonetheless assured it a wide diffusion. The Table itself is the oldest extant work to make use of the *Germania*, a 1st-century work of Tacitus. It is also the oldest work to mention the Bavarians. The Table was probably composed in the Byzantine Empire or possibly in the Ostrogothic Kingdom, around 520. It may have originally been written in Greek. Its author fit contemporary peoples, mostly Germanic, into a framework supplied by Tacitus. Later copyists frequently combined the text with lists of Roman and Frankish kings, which some modern editors have treated as integral parts of the text. Title: In 1851, Karl Müllenhoff assigned the text the name by which it is now generally known as the Frankish Table of Nations, because he thought it was written from the perspective of a Frank of about the year 520. Georg Heinrich Pertz, in the first published notice of the text from 1824, called it *Populorum Germanorum generatio* or the generation of the peoples of the Germans. Except the Franks were not German's, but Jews. Müllenhoff himself, in his edition of Tacitus' *Germania*, included it in an appendix as the *Generatio regum et gentium* or the generation of kings and peoples. Bruno Krusch calls the addition to manuscript D containing the Table *De gentiliis et barbarorum generationibus* or on the generations of peoples and barbarians. David Dumville, in an appendix to his edition of the *Historia Brittonum*, calls it the *Genealogiae Gentium* or the genealogies of nations. The genealogies of races, oh my and you all thought we were all the same types of humans! Walter Goffart, what an unfortunate name, would have been better being called Roger or Todd, in his edition based on all surviving manuscripts places it under the title *Generatio Gentium* or generation of peoples. In three manuscripts the Table appears

under a rubric (title). In manuscript A it is *Incipit generatio regum* or here begins the generation of kings. In B *Item de regibus Romanorum* or item on the kings of the Romans. In M, it is *Hieronymus in cronicis* or Jerome in chronicles. This mystifying rubric suggests that the copyist saw a connection between the Table and the *Chronicon* of Jerome or something in that tradition. A chronicle falsely attributed to Jerome is found in manuscript F. Date: Müllenhoff dated the Table to around 520, while Krusch favoured the late 7th or early 8th century, since he believed that the list of Roman kings that accompanies the text in some manuscripts, was an integral part of it and could not be earlier than the late Merovingian period. Isn't interesting these manuscripts all survived and yet anything related to the people, doesn't. What an amazing anomaly that is. Modern scholarship accepts Müllenhoff's dating based on internal evidence. The Vandals and Gepids effectively ceased to exist after the conquest of their kingdoms in 534 and 567, respectively. The Thuringians and Burgundians were conquered by the Franks in 531 and 534, but are listed alongside the independent Lombards. The Lombards are an obscure people before their defeat of the Heruli in 510. Except the Lombards worshipped Odin and Mother Earth who they called Nerthus. The Bavarians likewise are not otherwise mentioned in any text before Jordanes' *Getica* in or shortly after 551. This suggests that the text was composed between 510 and 531. Krusch was correct, however, regarding the date of the Roman king list, which is a later addition. Was that because they wished to rewrite history and include not only the Merovingians, but the Carolingians as well? Place: The Frankish Table of Nations was composed either in Ostrogothic Italy or the Byzantine Empire. Goffart, its most recent editor, favors a Byzantine origin, as does Helmut Reimitz. Nicholas Evans favors an Italian origin. I think many people think of Byzantine and it is of a Muslim, Islam or Arab superpower at that time. But it was just a continuation of the Roman Empire that just moved further afield. Modern day country Romania was part of that, that is the origin of that name, a Roman-ian. The main argument in favor of an Italian origin is the use of the *Germania* of Tacitus. No surviving work earlier than this one made use of it, and the only other author to make use of it before the 9th century was Cassiodorus in Ostrogothic Italy. This is proof for the circulation of the *Germania* in Italy in the early 6th century. It is not known with certainty to have ever been available in the Byzantine Empire, although it may be quoted in the 7th-century *Strategikon* of Maurice. The content of the text provides evidence of a Byzantine origin, and its purpose is readily related to the interest of the emperors Justin I and Justinian I in a restoration of Roman rule in the West in the 520s. It may even have been directly linked to the accession of either Justin in 518 or Justinian 527. For the time, a Byzantine origin is consistent with an original composition in either Latin or Greek. Authorship: The author of the Table is unknown. Although there have been many past attempts to determine his ethnicity or nationality from internal evidence, the Table does not obviously glorify or denigrate any people in particular. All ancient books are doubtful at best and a complete fabrication at worst. Pay close attention to those books the denigrate or deny access to, like the Vedas. Whilst heavily promoting other books are a general warning to the public, these books are frauds, like the bible itself. Müllenhoff argued for the Frankish identity of the author and gave the Table its conventional name. Many arguments for a Frankish author would apply equally well to a Gothic one. Ferdinand Lot suggested that he was an Alan cleric. Goffart argues that if the author was writing in Ostrogothic Italy he was probably a Roman and not a Goth, despite

the fact that he does place the Goths first among the nations. Evans suggests he was an Ostrogoth. If writing in the Byzantine Empire, he was most likely a resident of Constantinople, the seat of power. In favor of the Byzantine hypothesis, Goffart argues that the Table represents the ethnic panorama of the current West as seen from a metropolitan angle of vision. No, it was seen from the perspective of the usurpers. Separate recensions of the Table are found in seven manuscripts. Six of these were assigned the sigla ABCDEF in the 19th century and the seventh is designated M: How interesting they left out the G, just like the G cloud and G matter and yet curiously made their own overlay symbol of the G via freemasonry. The seventh letter was M? as in Marduk? Echoes of Frankish paganism can be found in the primary sources, but their meaning is not always clear. Interpretations by modern scholars differ greatly, but it is likely that Frankish paganism shared most of the characteristics of other varieties of Germanic paganism. The mythology of the Franks was probably a form of Germanic polytheism, it was highly ritualistic. But so was paganism, which is another overlay program on and against the white peoples. Just like the Mormon overlay program, is a denigration of the Rus peoples into worshipping a program and entities of those who destroyed, killed and usurped them. It is classic hidden Stockholm Syndrome of the worst kind. Many daily activities centered around the multiple deities, chiefest of which may have been the Quinotaur, a water-god from whom the Merovingians were reputed to have derived their ancestry. The Quinotaur is a mythical sea creature mentioned in the 7th century Frankish Chronicle of Fredegar. Referred to as the beast of Neptune which resembles a Quinotaur, it was held to have fathered Meroveus by attacking the wife of the Frankish king Chlodio and thus to have sired the line of Merovingian kings. Sounds like the LEVI-athan to me. But perhaps the next line describes where it was from? The name translates from Latin as bull with five horns, a bull with five horns? All of which sounds in astronomical terms the constellation of Taurus. Taurus is known as the bull constellation and has 5 prominent stars and is shaped in a V, which is Latin numerals means five. The attributes have commonly been interpreted as the incorporated symbols of the sea god Neptune with his trident, and the horns of a mythical bull or Minotaur.

MYSTERY SECTION: The Mayan calendar's 819-day cycle has confounded scholars for decades, but new research shows how it matches up to planetary cycles over a 45-year span. It should be noted that both numbers equal nine. That's a much broader view of the tricky calendar than anyone previously tried to take. In a study published in the journal *Ancient Mesoamerica*, two Tulane University scholars highlighted how researchers never could quite explain the 819-day count calendar until they broadened their view. Although prior research has sought to show planetary connections for the 819-day count, its four-part, color-directional scheme is too short to fit well with the synodic periods of visible planets, the study authors write. By increasing the calendar length to 20 periods of 819-days a pattern emerges, in which the synodic periods of all the visible planets commensurate with station points in the larger 819-day calendar. That means the Mayans took a 45-year view of planetary alignment and coded it into a calendar that has left modern scholars scratching their heads in wonder. Because it is not our calendar is why, I believe their calendars are all different because they are from different star systems. While ancient Mayan culture

offered various calendar types, the one that baffled scholars the most was this 819-day calendar discovered in glyphic texts. Researchers have long believed this calendar was associated with planetary movements, especially the synodic periods, when a planet appears visually to return to the same location in the sky, as seen from Earth, of key planets. That I presume is the retrograde motion, which only makes sense with a helical spiral model, not concentric. However, each planet moves quite differently and matching up multiple planets into an 819-day span didn't seem to make sense. But it does when you look at it over 16,380 days (roughly 45 years), not just 819 days. That's a total of 20 819-day timelines. Mercury was always the starting point for the tricky timeline because its synodic period of 117 days, which matches nicely into 819 if you multiply it by 7. From there, though, we need to start extrapolating out the 819 number, and if you chart 20 cycles of 819, you can fit every key planet into the mix. Mars may be the kicker for the overall length. With a 780-day synodic period, 21 periods match exactly to 16,380, or 20 cycles of 819. Venus needs seven periods to match five 819-day counts, Saturn has 13 periods to fit with six 819-day counts and Jupiter 39 periods to hit 19 819-counts. Rather than limit their focus to any one planet, the authors write, the Maya astronomers who created the 819-day count, they didn't it was given to them. They envisioned it as a larger calendar system that could be used for predictions of all the visible planet's synod periods, as well as commensuration points with their cycles in the Tzolkin and Calendar Round. Yet nobody outside of THI asks, how did they formulate this calendar? Like all patterns that repeat, it would have taken peoples 78,000 years to formulate this calendar. That is assuming they started on the first day, charted it and kept records for 52K years to then recognize the pattern to see it repeat in the final 26K years. The Mayans haven't been on this planet that long. The question for the masses then is; if it was not the Mayans, then who? If this is from another planetary system inside of our solar system, it would mean it was a planet between Mars and Jupiter, which curiously now houses the asteroid belt, funny that. It could be Selene or Tiamat calendars, if from this solar system, yes that maybe a trigger for some of you.

This was sent in by a member on inner work and other aspects of it. What to expect during inner work when contacting traumas in earlier lives. In traumas and incidents in earlier lives, there is pain, sensations and postulates. There are accidents, losses of lives and fortunes and all these things that can make up a trauma. These memories that are hidden deep into unconsciousness, that can be re-stimulated when we perceive life in real time. Then the postulates from these earlier incidents can take control of our feelings, our emotions, our character, our thinking, our behavior, our decision-making, our actions and of our whole beingness. Traumas postulates can have content like I hate all men or women, I do not want to be a man or woman. He or she will never recover, I cannot stand fresh air, I will always be sick like this, god has not been helping me and so on. Still a re-stimulated postulate will unconsciously affect one's life. Added to this is psycho-somatic illnesses, that are the result of re-stimulation of moments of pain and bodily conditions in these moments. Added are also sensations that are the result of re-stimulation of moments in earlier lives. Sensation: Uncomfortable perceptions stemming from the mind (except pain) are called sensation. Sensation are basically pressure, motion, dizziness, sexual sensation and emotion. There are

others, definite in themselves but definable in these five general categories. Pressure: If one took a spoon and pressed it against the arm, that would be pressure. Motion: is just that, a feeling of being in motion when one is not. Motion includes the winds of space. A feeling of being blown upon, especially from in front of the face. A grenade exploding in front of oneself. Dizziness is a feeling of disorientation and includes a spinning, as well as an out-of-balance feeling. Sexual sensation means any feeling, pleasant or unpleasant, which is otherwise commonly experienced only during sexual re-stimulation or action. Emotion includes all levels of the complete emotional scale. Being happy or sad depending upon one's own circumstances at any given time, these are examples of how postulates can be at work. Emotion is closely allied to motion, e=energy plus the motion, being only a finer particle action. Matter in sensations: Evidently a very solid thought which is chaotic enough in its dis-arrangement of attention units, that you can't do too much about it. You will be able to dis-member this later in your inner work. A Solidification. Energy in sensations: Energy derives from imposition of space between terminals and a reduction or expansion of that space. Energy is thus dependent of space. Space in sensations: Space is not nothingness, space is the viewpoint of dimension and that is what space is. It is how far we look and if you didn't look you wouldn't have any space. Space is caused by looking out from a point, space is personal and appears when viewed. The only actuality of space is the agreed-upon consideration that one perceives through something and this we call a space. Could be said as a volume or a distance. Time in sensations: Time is basically a postulate that space and particles will persist. The rate of their persistence is that what we measure with clocks and the motion of heavenly bodies. Time is actually a consideration, but there is the experience of time. There is a distance, there is a velocity of particle travel and the movement of that particle in relationship to its starting point and in relationship to its ending point, itself is the consideration of time. We do not have to experience the time of leaving as the same as the time of reaching. We have been fast to leave the bad world order of theirs and we have been slow to enter the good world order of ours. As an example of how one can perceive time when waiting for something good to happen. Make it happen! Rate of persistence can be, as an example, chronic disease. Of course, there is a lot of other fantastic things there to experience during one's inner work. What to expect during inner work: Most people do avoid all types of inner work. All technologies regarding inner work, all traumas that they might contact during inner work. But they do not know anything about all the rewards that awaits them on the other side. Everything you ever wanted is on the other side of fear.

Two updates on countries I have visited recently, first up Ireland. Which when broken down is Ire=anger land. Which is exactly what will unfold when people find out the atrocities of his story within that country. All committed by the church, fake royals and community sell outs like Adams and McGuinness. Ireland's his story is as fake as the American his story, just a shame, the once lead podcaster in Ireland didn't have the balls to tell the Irish people the real truth. The restoration of that country is underway on a different level and will continue to do so.

As South Africa descends into violence again, with more reports of harming and killing whites unfolding again. A British tourist was killed for nothing yesterday and violence is escalating. One ponders the future of that country as it descends into chaos and your 8-12 foot gates and electric fencing may not protect you. There has been two major incidents since I left, a 5.3 earthquake and a road exploding in Johannesburg both of which were clownery attempts to disrupt fields, people and the region. Neither had an impact on a big picture scale, but with the rising anger and violence amongst the dominant population there, one fears for the immediate and long term future of that region. We have several members within that region and I am asking them to be more aware and cautious as the anger based fallout there continues.

Here is a deep pondering for you all. There are alternate Prime Material Planes that operate without passing through the Astral Plane, much like the World Tree in the World Tree cosmology. Implications? Questions?

As the world of traumas and 2D thinking and operating pervades our lives more and more each day. Pictographs shown to us as children displayed as learning and yet does it not create a different reality? The sky and other objects displayed as reality within a 2D format and a deep thinking unconscious sub reality of how things should look, but it isn't and it doesn't, does it? Mind meme overlays to take us all away from reality into a one and zero's world of binary thinking, decision making and their reality. A non-harmonic duality dance with a technological subset of faked reality and everything further away from Source and our triality reality where we decide what is real and what is not. The blurring of reality is buried deep within your neural connections all formulated education, television, movies and books. Whilst those four disciples are said for us to learn, the great question is; to learn what? How to be violent? Kill each other? Create materialistic fantasy lives borne only out of debt? Stunt our knowledge as we learn utter drivel? Develop envy, bitterness, greed and confrontation? Learn that the box whether it is a TV, Laptop or a computer is our new god? AI or otherwise. The descent into 2D of their world increases at a pace, technology abounds everywhere, all perpetuated by a creepy sky god in a cloud that is riddled by fear of what we will do, or why else the spying, recording and 24/7 surveillance. The two souls project has been going on since before Da Arya fell, of how to install two souls into one vessel, that didn't work though, thankfully. But mind memes like twin souls and twin flames were created with which to merge with their Metatronic overlay creation. The story of Jesheua 12 revealed that, chasing down another's wife is one of the Rus' deadly sins. Yet here he was, allegedly, chasing down Jeshewah 9's wife Mary, because it was his twin soul. On a spiritual level there is only one soul, otherwise everyone would be host possessed now, with another corporeal entity. Many of course choose to allow inhabitants to their body with excess alcohol and mind altering drugs, via non-corporeal entities. People find so many ways to add to their precious vessel, as another form of host possession is the child alter. Whereby they hold onto a trauma from their childhood, long into adulthood and even pass on with it. Many others run other programs on themselves via mother and father programs, whereby they become the mother or father or worse, allow the mother and father programs to hamper their love relationships. The simplest way to end those programs is to clear them out,

but oh how reluctant people are, and yet some you hear screaming for sovereignty, when they haven't even cleared themselves. Who becomes the sovereign then? The entities, the child, the mother or the father? But 2D and binary represents their world, which people tie themselves to regardless of whether they are awake or not. Everything is drab or flat, even colors, yet why in the dream world are colors more vibrant? More plentiful, more vivid? Have you ever thought of why that is the case? because you see with the heart/soul/spirit eyes, not the vessels. You can easily forgive a child who's afraid of the dark, but the real tragedy is when men and women are afraid of the light.

ENDING PIECE: This is something done by a member following a deep pondering I had and a download to go with it. I said something is missing as we are still seeing the females acting out, when things should be a whole heap better. Following certain events that took place earlier this year, plus the revocations done in the past. This is written by a female member and is not added to by me, here is what it says: Thomas has exposed in the shows and most recently in FHSTOS Plus 20, the fact that women in history forsook our men and chose the "gods" instead. Chose them to the point of mating with them and even destroying (killing) our men! This rejection of our men continues on today. The rejection of the good solid guys in favor of the "bad boys". This behavior does not make sense and we know that when things don't make sense, it's a program. Perhaps this behavior is a sort of penance for the rejection of good men, or perhaps the result of the feelings of unworthiness within the female? For the women who, once their consent was obtained, realized they'd consigned themselves into slavery and a breeding program. They experienced great misery, realizing what they had thrown away and disdained up to and including murder, in exchange for the bait of advantages. This choosing resulted in: Servitude, vicious competition between the females, deep shame, horrible mishandling including rape and babies taken away, repeatedly selling one's soul for any favors or for survival, throwing each other under the bus and the loss of the magnificent mothering instinct to protect our offspring and partner at any cost. Perhaps you're thinking; well that doesn't pertain to me. But how has that served us in the past, ignoring the plight of others? Maybe it's not a description of you, but remember, we are the seed sowers. We release the frequency with all our loving heart intention. Thus the changes begin to coalesce within ourselves and then roll out over the whole universe. Imagine the frequency of our loving intention out flowing with power, mighty power like a massive wave, spreading over our whole planet, spreading out through our solar system, spreading out through our galaxy, spreading out and permeating our whole Universe. Restoring brokenness, bringing systems back to the spiral flow of loving, of honoring, of valuing, of respect and truth.

So here we go: to revoke means to invalidate or cause to no longer be in effect, as by voiding or canceling. Re = regarding Voke = To be completely worthless or useless, to have little or no value... In reference to farthings (obsolete British units of currency worth 1/4 of a penny)

The Revocation: We hereby revoke all connections, cords, contracts, frequencies, energies and agreements, manifesting in rejection of the human male and the divine Masculine. Rejection in the form of: Devaluing,

false judgement, disdain, disrespect, ridicule, misrepresentation, disregard, using, as in the form of parasitic behavior. This includes instigating the ousting of his children from a previous partnership. We dissolve and render null and void, the contract and consent with: the shame and the self despite up to and including: Self-harm, unwillingness to open our hearts and bodies to our partners, loss of tenderness towards our offspring that was replaced with a critical and judgmental attitude, loss of tenderness in general. A loss of self-love and compassion towards ourselves in the graceful and powerful aging process to the point of self-mutilation, in the form of toxic injections, surgeries, foreign body implants etc. All this resulting in detachment from who and what we are. This revocation includes any and all programs and or programmed behavior that we and our past generations have adopted, that cause or have caused further and more disconnection from our human male counterparts. We do this through all time all space all dimensions and all realities and include our progeny in this life, past lives and other dimensions as well as our ancestors, thus clearing our DNA. We dissolve, sever and render null and void these agreements, consents, accords and detractions. We hereby transmute the frequencies, energies and vibrations from the negative, destructive forms into: Loving, embracing, incubating, accepting, trusting, valuing, honoring, respecting, shielding, protecting and fearlessness, which defines the magnificence of who and what we are. The hub of the spiral of life. The womb and wheel of life out-flowing. The safe place to be held, accepted and nurtured. We set ourselves free from all programs, overlays and illusions. We embrace ourselves, one another, our magnificent men and our tender children. We then integrate these transmuted energies and make ourselves whole again! We embrace the love flow inherent in the feminine that is aroused by the frequencies of our divinely masculine men. We agree that our unions will be without: Fear, competition, envy, jealousy, possessiveness or any other low frequency programs and/or overlays. We also consent to modeling this hereby revocation and declaration, so that those coming after us will be informed and set free. We agree to way-showing to other females, young, old and yet to be, in order that we are all set free. We acknowledge and innerstand that there are good, amazing, magnificent, courageous, strong, tender, loving men who simply want to embrace and protect his woman-partner. And we want you to know, that we await you to embrace you with loving arms and hearts. AND SO IT IS.

Something for all females to get behind, finger pointing at this stage of the game is pointless, pardon the pun. For those on mewe chat put I agree. For those who read the transcripts read aloud to yourself and those who just listen to the show, say I agree as well. Final song tonight is from all men to women, it is about openness, acceptance and embracing. Open your hearts in acceptance and embrace it and the love that goes with it. OPEN ARMS
