

## THI-SHOW TRANSCRIPT 2024-10-29

This first piece in three parts will highlight the dangers we all face with technology. I have warned about it many times throughout my radio show career and how it was part of the several falls that man and this planet has faced. The obvious warning about our destruction lies in the advancement of military hardware, some of which was supplied to them by off world entities. We in this lifetime have seen the development of those weapons and the potential of mutual destruction on this planet due to psychopaths. But there are many other examples of how technology can be destructive via spying, surveillance, cell phones and towers, frequency machines, whether HAARP or otherwise, CERN and the recent rise of drones. But the greatest threat of the modern technology is the war on our vessels and souls. The potential of psychopaths, who are potentially not from this planet again, to replace us with machines. Brain implants, vaccine implants, surgical implants, chemtrails and eugenics and many other invasive ways to bring down man.

Probably the most comprehensive THI show on this subject was called Clowns in Panic, which we went on and repeated with an extended version of it. The original was back in June 2019. That came just before the technological based push on us all with the pre-planned Covid scam just 7-9 months away. Early on in THI and even in my time at Cosmic Voice, I warned about the elites releasing a zombie virus to change things on this planet. This is all part of their think tank anti-humanity programs, ran by the many clowns that our extensive series called FHSTOS has revealed in startling depth and eventually clarity. This is an in depth study piece that covers life, our roles in it and the world they wish to create for us. But also how we all need to come together to counteract this bizarre notion by those who class themselves as our controllers.

This is a deep diving topic and wish to thank SOTT.net that supplied in the original article from which these shows manifested. In overview these shows will run alongside many parts of previous THI shows, whether it was The Clowns in Panic show, The Expose series, The MK Ultra and Cosmic Genetics shows plus the themes of eugenics, New Age programs and their NWO program. There has often been serious threats to humanity via asteroids, volcanic eruptions, tsunamis, plagues, droughts, famines and even an extraterrestrial invasion. But this piece supersedes all of those threats tenfold, as this is about changing man as we know it, forever. A further descent from 3d to 2d, from reality to a virtual illusion world on an epic scale. Buckle up it is going to get bumpy and wild.

All of our exalted technological progress, civilization for that matter, is comparable to an axe in the hand of a pathological criminal. That was said by Albert Einstein, in a letter to Heinrich Zangger (1917) One wonders what he would make of it now or after he himself contributed to the creation of nuclear weapons?

Abstract:

With the coordinated global release of the Covid-19 narrative in late 2019 and the subsequent illogical demands of governments, allied with transnational organizations and pharmaceutical giants, many people around the world began questioning the hasty, unprecedented and sweeping technological and technocratic changes being made to societies, all in the name of a highly marketed medical emergency. Despite new policies emanating from authorities to isolate, to mask, to restrict all social contact, to accept without question unique experimental gene and nanoparticle-based injections, and to abide by novel and absurd social norms, many people pushed back against the apparent tyranny. The more enthusiastic that governments were in deleting civil rights, suppressing freedom of speech and due process, the more that people sought to expose the story behind the mainstream Covid-19 narrative. This article, the first in a series of four, considers that story as it intersects with the trajectory of transhumanism. Here in Part 1 we examine how the current uninterrupted global push for a total top-down alteration of humanity, of human biology, of human emotions and social relations. It relates to a philosophy and history of well-funded and highly efficient business and military operations, framed as necessarily rational and inevitable. It will address the obfuscatory meanings of transhumanism so far propagated, and begin uncovering transhumanism's roots in the military-intelligence complex, taking NASA and its purported demand for cyborgs in space as our starting point. With a focus on primary sources and military-intelligence material, we lay the foundations for the subsequent three articles in the series, which offer an alternative possible way of understanding the current unfolding process, as one aimed at transforming human beings from natural and sovereign creatures to controlled synthetic forms of life. As alarming as that may sound, that is our current reality being imposed by the psychopaths.

#### Introduction:

In these times of great political, economic and societal uncertainty, we can be certain of one thing. Communities across the globe are beset by all the insidious forces of radical change, that women or men in power can dream up for the people, they pretend to speak for and rule. The forces of change rank in the command and control of a larger war, striving at every turn to camouflage the long-planned transition of humankind. Everything is subject to capture in the programs of transformation for nationhood, personhood, personal identity, agency and sovereignty. Some people recognize the tensions and the weapons deployed to bring about total captivity and change. Like the agency term the Strategy of tensions, all designed to confuse, distract and indeed bully people to act upon their whims and commands. Others deny the evidence of the campaigns waged against them.

In essence those people may actually believe evidence of people not becoming bots, but who are already bots. Don't be stupid cry the people, who won't look or hear anything outside of their controlled box of data, all supplied to them by those who are creating the problem. Their controlled box of data? You do realize that is a computer? The movie They Live confirmed that back in the last century, getting people to vote, obey, follow orders and just consume. The consume part may have been misleading to some, as you know sometimes words have two meanings. People assume it is the commercial consuming of buying lots of things

you don't really need, but what if these bots are consuming our energy? How is money created? Using our energy. How are bitcoins created? Using our energy. What happens when a living being has no energy left? They die, hence the money replacement from paper to crypto makes more sense, when crypto means death currency.

The difference between these extremes might be explained by the most contested space in the present war, the struggle for the heart and mind. As Edward Bernays reminds us, the mind must be continuously occupied, every bit as much as an army regiments the bodies of its soldiers. Soldier training, church masses and school training all operate on the same premise, repeat after me, follow me, only hear me and never think for yourselves and don't question anything. Fear and a deep sense of urgency, therefore, must be engineered so the projected sacrifice of bodies will, in the final tally, be found justified. So it is, also, with warnings issued to people today, that we must be on edge and ready to confront the threats posed to the environment by our own diseased bodies. The carbon footprints that must be reduced, poisoned ecosystems, and the intelligent machines, our self-proclaimed masters fund and deploy for our salvation. The reality is the carbon-based footprint is us, yet the world of non-listening people just blindly ignores it. All of them in an apparent state of bliss like a modern day City of Light pill used in the past and covered in the series The 100 series. The trans-human turn into a post-human world, populated by compliant cyborgs, is claimed as an inevitable step in directed evolution. Enhanced humans, the technocratic PR assures, will possess new superhuman abilities and will defeat their own mortality with routine nano-upgrades.

Trans means transitive, which means to change, also a word-forming element meaning across, beyond, through, on the other side of; go beyond Perhaps the Latin word transumption should be looked at in terms of an Earth and beings takeover? copying, transcription, passage copied, a taking of one thing from another. Middle English also had transumpt (adj.) adopted, taken over. Does that make sense now?

How are we to contend with such antihuman operations conspiring against us? In the words of Elon Musk, we must merge with machines to avoid becoming like monkeys, all said in a reverse Darwinesque fake ideology. One must question whether Musk himself is a bot or cloned being. Futures strategist to the Rockefeller Foundation and Chinese Department of Education, Michell Zappa, similarly warns that humanity has no other option than to be dragged, kicking and screaming, to the precipice of a future involving gene therapy, artificial organs, synthetic blood and vasculature and bioelectronic drugs. Well the Rockefellers are one of the most anti-humanity groups on the planet, so don't expect anything beneficial from them. Klaus Schwab, Founder and Executive Chairman of the World Economic Forum, the self-styled International Organization for Public-Private Cooperation, likewise portends that the future of technological innovation, doesn't change what you are doing, it changes you. If you take genetic editing, just as an example, it's you who are changed. He says technology will in the end lead to a fusion of our physical, our digital and our biological identities. The technological determinist mindset behind all such pronouncements is designed to leave no room for resistance or contestation.

Organized by transnational elites, the lockstep march of humanity into what has been called the Bio-Nano Age, the Virtual Era or the Fourth Industrial Revolution, reflects the transhumanist aspiration toward a post-human future. Did you grasp that last line? A post-human future, no humans that means. Are you truly taking that on board into your psyche and every fiber of your being? No humans. The gradual, inexorable march has been ongoing for decades, rooted in eugenic misanthropy, which we covered in Volume 1 of our book FHSTOS, all while packaged in false promises, that man can transcend the limitations of the flesh and aided by new and novel technologies, live forever. The irony of that statement is, with these vaccines they didn't enhance man, it severely injured, disabled or killed us. So where does the you can live forever narrative fit in? it doesn't. So their premise is false and they just want our energy and consent to preserve their lives, at the expense of anything from 3-8 billion people and or beings. The intellectual, physical, and spiritual move for a transhumanist form of immortality is also grounded in a socioeconomic transition, that reduces humankind to hyper-rational market actors configured always and everywhere as homo economicus, serving not human welfare, but monopoly capital's bottom line. In other words, a billionaire class. As a consequence, it further means that the new technocratic colonists, funding these emerging markets in bodies, brains and bloodstreams, will seek control over all means of human production and reproduction. Remember they have been sterilizing women in many different countries around the world.

Given that the value of human data is morphing into a key commodity and given that the corporate state must be involved in the process of capital accumulation, by mystifying its policies and calling them something they are not. Or they are trying to conceal them, who better than state-corporate, public private partnerships to manage the emerging market of trans-humans for the Internet of Things (IoT) and Bodies (IoB)? Things means personal possessions and bodies means us, so the internet wants our personal possessions first, then to claim us. Enter the net you go and you become trapped by the spiders "web". The movement finds at its center the world's wealthiest and most influential actors, spanning all sectors of power: a transnational elite urging a host of technological adulterations, advertised as upgrades to biological lifeforms of humans, animals, plants and microorganisms.

How are we to recognize the key signs of this fundamental transformation? A vivid image of an unfolding posthuman future is now coming into view, in the wake of the global push for total compliance with government-mandated injectable bio-nano gene therapies. The Kavli Foundation, for example, ostensibly a grant-making body, has partnered with key agencies in the expanding global network of public private partnerships. Public-private generally means the Intelligence Agency contractors. All pushing gene-based nanotechnology and synthetic biology around the world, including the US Military's Defense Advanced Research Projects Agency (DARPA) and the Rockefeller Foundation.

In addition to their interest in vaccines, all three organizations are part of a White House-funded initiative known as Brain Research through Advancing Innovative Neurotechnology's (BRAIN), including projects in

nanoscience, brain-machine interfaces and bioengineering. The European Union also has its own Human Brain Project, which it describes as one of the largest research projects in the world, forming part of its Future and Emerging Technologies initiative. The Project brings together 140 universities and institutions across 11 countries to focus on artificial neural networks, neuromorphic computing, AI, neurorobotics and neuro-inspired technologies. Most universities and institutions are operated by the intelligence and military agencies.

In the context of this abrupt worldwide turn towards gene-based, bio-nano solutions to purported social ills and emergencies, the following series seeks to build upon existing literatures by critically examining the underlying transhumanist trajectory that drives such developments. In particular, it aims to elucidate the role of the military-intelligence complex in transhumanism, as part of an ongoing project to transform humans for servitude in a new utopia, ruled and managed by the gurus, sages and supplicants of a presently unfolding technocracy. Utopia was listed on the document we covered in FHSTOS Part 9, held by the Trustee. It laid out the control structure and the plan, all oblivious to the Trustee who held it.

#### Defining Transhumanism:

Casual talk of transhumanism in polite company may evoke curiosity or confusion. It may engender in the imagination thoughts of armed survivalists trading rumors of government plans to microchip citizens like livestock. Exchanges may trigger vague memories of popular tropes in pulp fiction or fantasy film, integrating trans-human fascination with morbid entertainment and comic book superheroes who merge with machines. It may recall the cinematic special effects of Fritz Lang's *Metropolis* (1927) where Maria's life force is transferred to a sheet metal cyborg. Yes that is the uploaded consciousness technology I have spoken about, yet curiously it was in a film 97 years ago. All of which proves that all technology is far older than we imagine. The term mouse for a computer was termed in 1965, 20-30 years before the people became aware of it.

Perhaps the many approaches to treating transhumanism have been baked into layers of cultural reproduction, in order to create the appearance of some conflict between fringe irrelevancy and utopian aspirations shared among elites. Utopia is now termed as a place of almost love and light levels of existence, where everything is ideal. But Utopia means nowhere, no place. It comes from Greek word *ou* meaning not is an odd one, as it derives the word from the PIE root \*aiw- vital force, life; long life, eternity. So Utopia is not an ideal place or setting, it is a life longevity program for the elites. The control structure document that the Trustee has, lays out a Utopia done largely by off world entities. To achieve that, they need us, for now, but eventually they will delete us out of existence, or so they think. These ambiguities may be a feature of social engineering through media and education to incite public indifference and disengagement.

As a global project of control over (re)production and human beings, transhumanism entails a constellation of theoretical, practical and ideological strands, each of which involves what appears to be a mixture of esoteric mythologies, empirical realities and media hype, infused with technological developments, political

spin, tangible circumstances and the spectacle of unending public relations campaigns. Separating the material reality of this well-funded global project from the confusing forms of propaganda that support it, can be complex and challenging.

Not least among the complications involved in defining transhumanism, is that the usual approach to defining the term acts, itself, as a propaganda device. Proponents of transhumanism consistently define their project in evaluative and positive terms, as a quest for augmented evolution, human enhancement and the overcoming of human limitations. Also the fact, that people are that stupid now, many of them will think a discussion on transhumanism is about the transgender people. Trans- gender means to go beyond gender, after that comes to go beyond being human, a machine. That is the flow of where they are taking this.

According to the Transhumanist Manifesto, which has been published by NASA, the European Space Agency and the Italian Space Agency, transhumanism is: A worldview that seeks a quality of life that brings about perpetual progress, self-transformation, practical optimism, visionary solutions and critical thinking, the transhuman. The transhuman is a biological-technological organism, a transformation of the human species that continues to evolve with technology.

Why would two space agencies be involved in the transformation of the people? Surely that is a government policy? Well it should be, but the reality is quite different. Maybe the use of space agencies to promote changing the people is indicative? Maybe those operating those organizations are actually from space.

Humanity+, the source of the Transhumanist Manifesto, defines transhumanism with reference to Max More, one of the pioneers of the movement, positioning transhumanism as: The intellectual and cultural movement that affirms the possibility and desirability of fundamentally improving the human condition through applied reason, especially by developing and making widely available technologies to eliminate aging and to greatly enhance human intellectual, physical and psychological capacities.

You can do that by teaching children and adults better and also improving health instead of destroying people's health as currently.

Such definitions and their supporting elaborations are peppered with concepts connoting perfection, betterment, greatness and utopianism. Questions such as Perfect for whom?, Better on what grounds? Enhanced according to what criteria? go unasked and unanswered. Can't ask common sense questions or display critical thinking on this world, as both are beyond the intelligence levels of the elites. NATO's Science & Technology Organization, for instance, lists enhanced lethality as an objective of human enhancement technologies in the military-intelligence domain. Yes, because most of our technology "advancements" have been weaponized against us. Predictably, all without stipulating what terms such as enhancement and evolution mean, self-flattering platitudes at best, and lethal doublespeak at worst, can be injected into the very

meaning of transhumanism, with important perception-management implications. Ah the perception, just like assumption are always steered onto a wrong path, all due to us not learning the definition of the words not only what we are saying, but more importantly, what we are consenting to.

A tried and true propaganda tactic is to repeatedly pair a target word with positive or negative associations. In experimental research, simply pairing a political candidate's name with subliminally presented positive or negative cue-words, is sufficient to influence outcomes such as candidate evaluations and political attitudes. As a form of subliminal messaging and classical conditioning, the repeated pairing of a propaganda target with an emotional association, or affective tag, in this way triggers unconscious automatic emotional responses with powerful perceptual and behavioral consequences, including for citizens' voting patterns.

And so it is with defining transhumanism. By embedding vague terms denoting beneficence and altruism into the very definition of the word, it acquires the power to evoke the kinds of subliminal affective responses often associated with benign material, such as trust, ease, equanimity, nonchalance, while suppressing the responses associated with threat like vigilance, caution, attentiveness, circumspection. Through repetition, defining transhumanism thusly turns it into a pacifying cue-word, capable of subtly and subliminally subduing its audiences. That is why the meme came into existence, it is mind meme-ry transferred into mind memories, a subtle MK Ultra tactic.

Importantly, the benevolent self-definition advanced by transhumanists has been taken up and uncritically amplified more widely, by dictionaries, encyclopaedias, journalists, commentators and scholars, infecting virtually every effort to discuss the movement more deeply. That is because their books and mouth pieces are all corrupted beyond basic reasoning. Consider, for instance, the definitions offered by Wikipedia and Google's Oxford Dictionary: Transhumanism is a philosophical and intellectual movement which advocates the enhancement of the human condition by developing and making widely available sophisticated technologies – Wikipedia. The belief or theory that the human race can evolve beyond its current physical and mental limitations, especially by means of science and technology – Google's Oxford Definition. Notice it is no longer the Oxford dictionary, but the scaled down Google dictionary now.

Such mainstream approaches to defining and disseminating the popular meaning of the term constrain analysis. In other words, the conceptual framework within which the definition of transhumanism is propagated, leads researchers nowhere outside the narrow boundaries of technological upgrades, which subconsciously affect practically all approaches to understanding the project beyond its claimed overt beneficence.

With these considerations in mind, rather than perpetuate the propaganda effect of an acclamatory approach to defining terms, we offer a definition cleansed of dogma, affective tagging and positive spin. Cognizant of

the reality that enhancement is in the eye of the beholder, we define transhumanism as: A project to engineer human biology by technological means on a mass scale.

The technological means in question could involve genetic engineering, synthetic biology, bioelectronics and human-machine interfaces among others, encompassing biotechnology, nanotechnology and bio-nanotechnology. The reengineering of human biology could occur directly or indirectly via transformations to the human habitat, such as through engineered adulterations of the natural environment, atmosphere, air, water, plant life, livestock, weapons and pharmaceuticals. That is the true status of transhumanism, no matter how much they sugar coat it.

Are they sanitizing atrocity by definition? In addition to the power of pacification, defining transhumanism as betterment leaves the transhumanist movement open to questionable agendas. Were agendas such as lethality and harm-doing, to attach themselves systematically to ill-defined notions of enhancement, the term transhumanism would double as a morally disengaging tool, by sanitizing atrocity under the rubric of 'advancement'. Moral disengagement is a psychological process by which a specific event, such as mass extermination, can be placed outside the boundaries of one's usual moral frame. A common device for achieving this is sanitizing language. Wrapped in the balm of neutral and forgettable terms, harm is rhetorically cleansed, the reality fails to emotionally register and indifference is invoked. Hence, the banality of evil. An example of this is the US Military, sending soldiers in harm's way for the enhancement and advancement of America, except it is not. Just as sexually assaulting victims with medical equipment was described as 'enhanced interrogation' in the War on Terror, so mass killing is disguised using anodyne-sounding medical language for the War on Covid-19™.

In a related vein, throughout transhumanism's strands, misanthropic, eugenicist and even democidal goals are set alongside claims to pursue human enhancement for the betterment of civilization, human safety, security and well-being. We should all now know, these controllers have done no betterment of our civilization, they are not interested in our safety, security or wellbeing. If you didn't know that before Covid, you should by now. Consider the sort of conflicted thinking needed both to communicate and to effectively obscure the processes of total transformation of the human being, prepared for a technocratic posthuman world.

Already today we have the technical ability to start redesigning humanity. The inorganic way, of linking humans to computers, brains to computers or even creating completely non-organic entities, artificial intelligence, perhaps even artificial consciousness, which is even a more radical change. You can say that genetic engineering is just playing with the same bits and pieces that evolution has played with for billions of years. This is something completely new, to create really inorganic entities. Except it is not, as our Cosmic Genetics series revealed, this has gone on for billions of years.

Now humans are developing even bigger powers than ever before. We are really acquiring divine powers of creation and destruction. We are really upgrading humans into gods. We are acquiring, for instance, the power to re-engineer life. Actually that is not true either, as we are not upgrading humans into gods, they are attempting a devolution of humanity into 2D thinking mind and eventual reality. Humanity has hardly created any gods for the last 2-5K years in terms of soul development. Plenty have come acting as fake gods though, all through the use of these types of technologies. True gods are organic, fake gods are technological based, just like the god in the bible.

Fast forward to the early 21st century, and we just don't need the vast majority of the population, because the future is about developing more and more sophisticated technology like artificial intelligence, bioengineering. Most people don't contribute anything to that, except for their data. Hence the term useless eaters or greedy little piglets from Cassandra, were they harsh? Sadly no. Too many of the masses just take and too few give, creating an uncaring and unsharing society and ultimately falling into the trap set by the controllers.

The ultimate value of human beings will be just as consumers that will do nothing useful at all. However, you could have consumers which are not humans, which are not conscious. If you're not part of the revolution fast enough, then you'll probably become extinct.

In his 2018 presentation to the World Economic Forum and 2020 interview above, Yuval Noah Harari, futurist, historian and frequent guest in elite circles, perhaps the most notorious academic commentator on transhumanism, exalts the purported power of human ingenuity to supersede the natural pathways of evolution. Harari is a Jew and remember their Talmudic motto; death to all non-Jews, except the ones you need as slaves. So it is no surprise he and who he represents are pushing this agenda, they are the anti-humanity group. Today's leading engineers and programmers, he claims, are able to upgrade, for the betterment of human flourishing, human beings and their uninterrupted social, economic and neural connections to the global central nervous system, the Internet.

The implication is that humans, reengineered as partly inorganic entities with enhanced synthetic computer/brain power, will enjoy new superhuman abilities to defeat mortality and live forever. Spoken plainly in public, such talk is often portrayed, however, as lunatic and thus largely confined to the periphery. The overt disdain for elite proclamations such as these passes as acceptable, because most people appear to remain steadfast in their willful blindness to the ongoing class warfare being waged against them.

In contrast, Harari's other talks take a more sinister turn into eugenics and the necessary reduction in value of human beings with inherent dignity and moral worth. Of which Harari has none, just a cold and calculated inorganic like entity who is so far up his own ass, he can see his own teeth. Maybe Harari is inorganic? Maybe that has to be considered by the listener or reader. Similar contradictions run throughout transhumanism's disquisitions. With the rise of advanced robotics, machine learning and a future prospect of quantum

computing, most creatures produced by natural processes of biological procreation are unnecessary to a world, measured only by what is highly efficient and economically expedient.

It is hardly any wonder that the World Economic Forum stands at the center of this global program in which the spheres of corporate power and influence have fully merged with the state. If all this sounds eerily similar to some friendly form of fascism, it just might be a clear warning elaborated by Bertram Gross in 1980. The collection of information is now possible through increasingly sophisticated systems, he observed, including the more ominous forms of remote electronic surveillance.

Gross foresaw in this emerging order a beguiling sort of fascism, in which more concentrated, unscrupulous, repressive and militaristic control by a Big Business-Big Government partnership would preserve the privileges of the ultra-rich, the corporate overseers, and the brass in the military and civilian order. For those new, Fascism is Zionism. He pointed out that this fundamental redesign of the social world is framed in public discourse as exceedingly reasonable and inexorable, because it is overtly friendly to business and, thus, part and parcel of the logic of an efficient and free market. But anything that is beneficial to corporate business, has never been friendly to we the people.

In an example of the market-friendly public discourse that sugar-coats transhumanism, Nick Bostrom, a leading academic transhumanist who hails from what is known as transhumanism's Oxford School, Oxford was involved in the Covid scam remember, he wrote in 2003: Transhumanism is a loosely defined movement that has developed gradually over the past two decades. The term itself was first proposed by Julian Huxley in 1951, reportedly to rebadge eugenics following WWII. It promotes an interdisciplinary approach to understanding and evaluating the opportunities for enhancing the human condition and the human organism, opened up by the advancement of technology.

Bostrom is co-founder of the World Transhumanist Association, an original signatory of the Transhumanist Declaration of 1988, and Founding Director of the Future of Humanity Institute at Oxford University from 2005 to 2024. It should be pointed out that Tavistock was formed at Oxford University, London, by the Royal Institute of International Affairs in 1922. We covered Tavistock and their skullduggery in FHSTOS Plus 26 called Have you lost your mind? In a paper titled, Ethical Issues for the 21st Century: Transhumanist Values, he explains that: Transhumanists view human nature as a work-in-progress, a half-baked beginning that we can learn to remold in desirable ways. Current humanity need not be the endpoint of evolution. Transhumanists hope that by responsible use of science, technology and other rational means, we shall eventually manage to become post-human beings with vastly greater capacities than present human beings have. The arrogance of that statement is staggering, we are talking about the crown of creation now, a spark of Source and these psychopaths think they are gods, turn it in. They are weak, weasly entities riddled with fear and low self-worth, unable to sustain themselves without harvesting and technology.

By way of elaboration, Bostrom offers a vision of posthuman beings that reads like a script for a new Disney fantasy film, entirely divorced from the weaponized reality of human ‘enhancement’ research and development currently underway. Does Bostrom’s seeming unspoken embrace of social Darwinism serve to justify the belief that humans are no more than lab rats to be used as subjects in experimental upgrades? In a paper titled, *Human Genetic Enhancements: A Transhumanist Perspective*, he opines: We can conceive of aesthetic and contemplative pleasures whose blissfulness vastly exceeds what any human being has yet experienced. We can imagine beings that reach a much greater level of personal development and maturity than current human beings do, because they have the opportunity to live for hundreds or thousands of years with full bodily and psychic vigor. We can conceive of beings that are much smarter than us, that can read books in seconds, that are much more brilliant philosophers than we are, that can create artworks, which, even if we could understand them only on the most superficial level, would strike us as wonderful masterpieces. We can imagine love that is stronger, purer and more secure than any human being has yet harbored. That guy is delusional, the people can achieve all of that now if there was less interference, more teaching and a more balanced society.

As mere mortals observing Bostrom’s effusive speculation, we can’t help but ask: can we? In human-machine hybrids? Love that is stronger and more pure than any human being has yet harbored? Love, the quality that most decisively distinguishes human beings from machines, will be enhanced by technology? How? It's not possible, because these beings are incapable of love, only the illusion element of it.

Bostrom’s fellow Oxford transhumanists and contemporary co-authors, Brian Earp, Anders Sandberg and Julian Savulescu, have advanced a vision of technologically enhanced love in *The American Journal of Bioethics*. The bioethicists and futurists advocate manipulating the experience of love, in pursuit of what they call well suited relationship bonds. Like their “well suited” incest bonds? It is striking, to say the very least, that the most powerful human emotion that has motivated the highest forms of sacrifice, service and culture in history, should be dressed up (or down) in such rhetorically banal terms. The key tool that Earp et al. propose for achieving this objective is anti-love biotechnology. Is this what Bostrom means by enhanced? Yes they will enhance the illusion, as how can people who don’t experience true love, formulate a computer program to create it? These people cannot comprehend love, they replaced it with lust and carnal desires of an evil nature. But carnal also means world or Earth based, which is not where you find the true love frequency. It doesn’t reside here but out in the Cosmos, but maybe one day it will return here, but first people have to truly learn to open their hearts.

Is the anti-love injection akin to Huxley’s Soma in *Brave New World*? They stress the urgency of the ethical project, including finding a cure for love, arguing that under the right sort of conditions, anti-love biotechnology could even be morally required. Of course, this sort of rationalizing of biotech interventions would make perfect sense to minds occupied by the belief, that humans are no more than economic machinery whose basic functions must be regulated or replaced altogether by more robots. The Oxford academics, whose

transhumanist endeavors have as their base the power and position of the oldest English-speaking university in the world, describe a future in which we may one day find ourselves with an array of pills, biochips and neuroceuticals that could successfully treat problematic passions. Hence the saying; we made man in our image and their image has no emotions of love, compassion or empathy, just a cold and calculating machine.

A second definitional approach to sanitizing transhumanism is to pit it against a devalued notion of unadulterated human beings. A report by the Science and Technology Options Assessment group of the European Parliament, for example, states: Transhumanism is the idea that humankind can and should, be perfected beyond its present limits by the use of appropriate technologies. These views are countered by a small but vocal group of conservatively minded opponents of human enhancement.

Similarly, a 2020 report by the Center for Naval Analyses for the US Office to the Chief of Naval Operations places opponents of transhumanism into one of two camps: bio conservatism or bio luddism. Luddites were British people who advocated against the use of machines in the Industrial Revolution. According to the report: Transhumanism describes a philosophy of transforming the human condition to enhance both body and mind. In contrast, bio conservatism takes a hesitant stance toward the merging of humans and technology, often with a focus on the unnatural and uncertain ends of such merging. And bio luddism or neo-Luddism, for technology in general, rejects emerging biotechnology and passively or actively opposes its effects on the environment, individuals and communities. An illustrative sentence reads: Bio luddites oppose anti-love biotechnology.

To be clear, this definition, provided to the US Department of Defense, treats safeguarding unadulterated humanity as a product of one of two things: political orientation (bio-conservatism) or technological backwardness (bio luddism). All too typical of the US DOD in my opinion, treating people like cattle and for their own lust for war and shekels. No surprise that came from the Naval Operations as they are run by the SSP, a secret space program or group ran out of Norfolk, Virginia that involves off world races, who operate against us. To those who are new and struggle with the off world connections, just think about it on a wider scale. These elites have gone about changing the atmosphere, the water, the food, the environment, poisoning us with drugs and potions and now they want to change the whole structure of man, does that sound like someone who is human? Think about it, I mean really think about it. You may still wish to dismiss the notion, but that will not then facilitate the change we need to correct all of this. Perhaps this next piece may get you to look at it more?

Titled Superhumans: Implications of Genetic Engineering and Human-Centered Bioengineering, the report's purpose was to provide the US Department of Defense (DoD) with recommendations for navigating a future of cyborgs and genetically engineered humans. The document alerts the reader that: Biotechnology specifically, the physical modification of biology with technology, has a trajectory that goes beyond reversible human-machine teaming and ends with cyborg-like possibilities of endless enhancements and modifications.

They wish to alter the crown of creation to win a war? Psychotic. And genetic engineering, particularly with the accessibility offered by CRISPR1 (clustered regularly interspaced short palindromic repeats) and related technologies, has a trajectory that promises smarter, stronger and better humans from birth, heralding the advent of homo superior. It is not superior at all, it is the end of the human race on this planet. That is Cosmic Genetics right there, for those new that is a 4 part series dating back billions of years of alien races interfering with our genetics, available in the archives under the FHSTOS Plus series.

Having stigmatized those opposed to such developments as bio conservatives or bio luddites, efforts to protect homo sapiens (including from birth) against a genetically engineered takeover by homo superior, that is, the prospect of de facto human extinction are cast as politically and psychologically reactionary. By comparison, transhumanism, and its posthuman, species-altering goals, are portrayed as the evolved, rational and progressive alternative. Whenever they say it is for your benefit, health, safety and security, it is a lie and a program against us.

Such equating of posthumanism and progressivism echoes a definition of the 'transhuman' put forth by transhumanist pioneer Max More in 1994: A transhuman is someone in the transition stage from human to biologically, neurologically and genetically posthuman. One who orients his/her thinking towards the future to prepare for coming changes and who seeks out and takes advantage of opportunities for self-advancement. Do people really grasp this section? They are trying to make humans extinct! To the religious, where is your god on this matter? Is he protecting or saving you from this evil program? No? then you have a moral duty to protect and save yourselves and each other. Because no one is coming to save you.

In reality, we contend, transhumanism is a product of powerful institutions, long believed to serve the public interest, which have been captured by a transnational regime of financiers and technocratic stakeholders, who have worked hard to vanquish all memory of the public commons and the sovereign rights inherent to each human being. Freed from long-held universal moral imperatives, the global transhumanist movement that nudges the masses to consume its wares, also manipulates, patents, and, in this present third-wave marketization of the global economy, commodifies the raw materials of life. It pretends to be not merely a master of mimicry (biomimetics), but an omnipotent all-knowing creator of material substance. God-level: Divinity, according to Harari, is not far enough to describe what we are trying to do.

But is that not a contradiction? Divinity or god head? Turning man into machine does not produce gods, does it? What it does produce is those who act like god using technology, which is why the god in the bible is an AI sky god, the man who sits on a cloud. A cloud is a storage device that collects all our energy and data, are you getting it now? Harari being a non-emotional being and also a Jew, is a typical of that race of beings and their sheer contempt for humans. Again for those struggling with the off world connections, does it not make you think of the possibility that the Jewish culture which is anti-humanity is based upon an off world race?

Turning man into Homo superior? Think deep again, Jews are allegedly the “chosen” race and consider themselves superior, homo or otherwise, to all other races here. Are you connecting the dots now?

Indeed, the charisma with which the industry of transhumanism is sweeping the world is, in Martine Rothblatt’s view, grounded in the ideology of transgenderism. Rothblatt is a billionaire transgender and transhumanist activist who authored the book *From Transgender to Transhuman: A Manifesto on the Freedom of Form*. For those who think I am picking on the Jews, Martine Rothblatt is also Jewish. The process of transition, according to the Transhumanist ethos, necessitates the construction of neologisms (beme), representing the bio-electronic human who has transcended the citizen of an information society of the flesh-and-blood human, but vitally relies upon vast portions of their life being stored and processed electronically. Such people can be said to be transbeman, they transcend both the human and the beman worlds. (2008)

The wealthy and influential Rothblatt got her start in satellite tracking systems following a visit to a NASA tracking station in 1974, after which she worked for NASA in the 1980s, and served on the Space Studies Institute board of trustees. Alongside transgenderism, Rothblatt promotes the use of nanotechnology in life extension, cryogenics, humanoid robots and cyber-consciousness. Is Rothblatt and her NASA connections indicative? NASA is a space industry connected to the Cosmos, is that another example of connecting with off world races? What if NASA are an off world race of beings?

Accordingly, with its aspirations to outdo Divinity and to transcend the trappings of human flesh, transhumanism represents man’s hubris and degenerate belief in human effort alone, to intercede with total precision and success in all natural processes. It involves attempts to engineer artificial evolutionary pathways, that lead human beings toward a state of departure from their present stage as the most highly evolved creatures. Which is mired in laziness again, there is no cheat code for the evolution of any species, we are not a computer game. It involves learning about everything and more importantly about yourself. Technology is the left hand path and learning and developing is the right hand path. Infused in this project is conceit beyond measure as wo/men in power pretend to play the role of supernatural creator and arrogate to themselves the right to control the sovereign will and desire of the human being to think, to feel, to act and to reproduce.

We make the case in this series of articles that, to this end, the persistent campaigns of coerced injections of humankind with experimental gene therapies have served as key signifiers of the transhumanist project, both to rewrite the code of life itself with man’s technocratic interventions on the natural order, and to reengineer biology and merge humans with machines. All as part of an organized and well-funded project to repurpose humans for use in some imagined seamless synthesis of markets, societies, bodies, brains, bloodstreams, battlefields and belief systems, guided by a singular manmade force of unparalleled computational power. “Guided by a singular manmade force” is it really man or just the image of man? A smith, a copy of a copy of man.

Of course, all of this effort in trying to create and wield nearly omnipresent control over unpredictable, dynamic and interdependent biological systems, necessitates the application of immense intelligence, the sort that can operate with nearly unlimited resources, brainpower and funding. The trouble is, their version of intelligence is as useless as the intelligence agencies, they are unintelligent in every way shape or form. A non-evolved group of beings hellbent on life being about destruction, death, harvesting and abuse. Again I will ask, are these human?

### Transhumanism: Flight of Fancy or Military-Intelligence Operation?

In the present age where public perception is tightly managed, censorship, compartmentalization and erasure are prevalent. This is why certain primary source materials need to be unearthed from archives and carefully examined.

As a case in point, buried in web pages archived on the Wayback Machine lies a record that on August 14 2001 the Chief Scientist from the NASA Langley Research Center, Dennis Bushnell, gave a talk at a symposium organized by the National Defense Industrial Association (NDIA), on what amounts to a military-intelligence roadmap towards transhumanism. Bushnell was, at the time, a 40-year NASA veteran and remains NASA Langley Chief Scientist today. He worked for NASA and Langley? What a combination that is. The presentation was titled Future Strategic Issues / Future Warfare. It was intended as a heads up to NASA's national security partners on the future of technology as applies to both the military and society, with a view towards the years 2025-2030. The second slide read, The Bots, Borgs & Humans Welcome you to 2025 A.D. Hmm the 2025 date comes up again. The slides accompanying the presentation can be found at an archived web page of the US DoD Technical Information Center (DTIC).

Slide 1 from the Future Strategic Issues/Future Warfare presentation in 2001.

The talk's stated purpose was to guide not only the Department of Defense (DoD)'s military strategy, but also military-intelligence procurement decisions and Research and Development planning. Its projections and predictions were derived from NASA's futures work with 30+ other national security agencies, including DARPA, the CIA, the DIA, the US Army, the Air Force, and numerous other national security bodies. It should be noted that, those just mentioned are all agencies who work against humanity and organic evolution. As part of the talk's preamble, NASA-Langley stressed that the futuristic technologies it described were "NO PIXIE DUST". Maybe it was just smart dust sprinkled everywhere. Clearly aware that the technologies and concepts contained in the 113 slides would appear improbable to many audiences, Bushnell explained that new technologies such as those he described often take 15+ years to produce, after which they remain in inventory for 40+ years. Which confirms they have tech way beyond the public's versions. Like I have said, once they promote it the public, it means it was already operational decades previously.

Consistent with Bushnell's claims, Harvard science historian Peter Galison writes that classified scientific research is on the order of five to ten times larger, than the open literature that finds its way to our libraries. Thus, it is we in the open world who are living in a modest information booth facing outwards, our unseeing backs to a vast and classified empire we barely know.

With the benefit of access to that vast classified empire, Bushnell, in his 2001 presentation, provided an overview of ongoing worldwide technological revolutions in IT/Bio/Nano fields, which, according to slide 7,

were taking place at triple/exponential rates, with changes occurring at scales of months (instead of decades). The talk predicted that the underlying global explosion in technological revolutions would see the advent of a new era for humanity, slated to commence in 2020. Just when the Covid era started, which reveals it was a manufactured disease designed to introduce control based technology. NASA Langley dubbed this new era the Bio/NANO Age (slide12). Why the year 2020 was chosen as the dawn of a new Bio/NANO era for humanity was not explained. Perhaps THI warned you from around 2015-16 onwards, when it stated in 2020 you will see. A Virtual Age, in contrast, was designated to commence at some unspecified time, denoted by a question mark. That ultimate Virtual Age was to bring with it the robotization of key developments from previous eras, and a shift from living life in reality-based environments to existing in virtual ones. Just as I have warned multiple times, it is going from 3d reality to a 2D illusion based world.

On the road to the Virtual era, according to NASA Langley, the Bio/NANO Age would subsist on social and economic disruption, just as the Industrial Age had subsisted on raw materials and the Agricultural Age on farmlands (slide 107). Consider the distinctions drawn to frame the major transitions: the new Age feeds on societies, the livelihoods and bodies of human beings, while the preceding Ages fed on renewable resources in the natural world. The technological landscapes of the Bio/NANO and Virtual eras were to comprise genetic engineering of human beings prior to birth; implantable electronics for monitoring, computing and brain stimulation; cyber and artificial life; biocomputing; automatic/robotic everything; nanobots; smart dust; and ubiquitous immersive holographic and virtual environments. “To comprise genetic engineering of human beings prior to birth”? Seriously? And yet people never focus on these things. Too often now people have been blasé and indeed blatantly ignorant of what is unfolding before their eyes. I wonder why people have eyes or ears, because they don’t appear to see or hear anything. They never real-eyes until it is too late, everything is angry reactionary, not proactive blocking or stopping the problem. The Covid scam revealed that in stark clarity. These and other radical societal transformations were anticipated to occur with the help of a Trojan horse, civilian systems (slide 81) All of which is consistent with the alleged rollout of military technologies under the guise of public health, since 2020 [slide 51, 52, 53, 54] and the surreptitious nano tagging with microwave interrogation of everything and everyone on (slide 88).

In all, the document signposted key ways in which the path to transhumanism would be paved by weaponry, including in civilian disguise and arranged according to military-intelligence designs, both in strategic and concrete Research and Development and procurement terms. Despite the immense curiosity-value and potential social impact of the 113 slides, however, they have received little to no attention in the civilian world, with a few notable exceptions.

Ten years later, in 2011, Bushnell told an audience of environmental scientists that the ongoing bio-revolutions in genomics and synthetic biology, offer the very real possibility of designer life forms including humanoids. Humanoids, like us but not us, don’t they think we have enough of these types of humanoids already? What happens when the world finds out many people they encounter are not real? Clones, Synthetics,

Bio-bots, that's without the non-humans in skin suits. The transhuman aspect has already unfolded with the transgender program, to a point where those who know and see, wonder just who is man or woman these days. A former President and his first man, plus many of the so-called movie stars being revealed as the opposite sex than they portray. All of which leads to confusion.

One may wonder whether Mary Shelley who was the author of Frankenstein, will be lionized at some point, with a posthumous Nobel Prize for her conceptual contributions to today's movements toward manmade monstrosities. These revolutions, Bushnell noted, would form part of a technological future that audience members should expect in their children's and grandchildren's lifetimes. He explained that via biomimetics they've nano-sectioned the neocortex, and they're replicating it in silicon, and they're having great success. In the interim, Bushnell warned that even without silicon brains, in 2011 the robots are taking the jobs. And the humans increasingly can't compete. Going forward, with more advanced artificial intelligence, what people will do all day is not clear. Is this project merely the conclusion to the rapacious logic of central banking, to jettison humans from all areas of cultural, economic and biological production? Of course it is, yet where is the so-called church on these matters, as clearly this group is playing god with our lives, and given they have self-appointed themselves as messengers of god, just where are they? The reality is, the church is involved in it as well, because it is their fake god they are all bowing down to.

Humans are becoming cyborgs, the NASA Langley Chief Scientist continued. Here is the shocker revelation: We have put brain chips in about 10,000 people, DARPA is working on brain chips for super soldiers. Fifteen to 20 years out, if you don't have all of these chips in you, you can't compete, particularly with the machines. In fact we are merging with machines. 10K already chipped in 2011? And you all thought this was new with Elon Musk and his anti-human brain chipping technology? The question is why would people do this? This is not evolution at all, it is a complete desecration of a Source based living being. Of course our members will know that this Cosmic Genetics games has been going on for millions, if not billions of years. There are some really massive effects of the IT/Bio/Nano quantum energetics tech revolutions that are now double exponential. If you want to check where the frontier of this kind of thinking is, read Ray Kurzweil, who, Bushnell added with zest, is right on it!

In his book *The Singularity* (2005), Kurzweil describes a 2030 scenario consistent with NASA-Langley's Virtual Era, under which Nanobot technology will provide fully immersive, totally convincing virtual reality. Nanobots will take up positions in close physical proximity to every inter-neuronal connection coming from our senses. Hence the requirements to take their fake Covid jabs, of which the spike proteins are what is extending from and to the neural connections. Nanobots will be capable of generating the neurological correlates of emotions, sexual pleasure and other derivatives of our sensory experience and mental reactions. Nanobots will be introduced without surgery, through the bloodstream and, if necessary, can all be directed to leave, so the process is easily reversible. They are programmable, in that they can provide virtual reality one minute and a variety of brain extensions the next. So who and what is Ray Kurzweil, well he was born in

New York and born to Jewish parents. For those new, every rogue group leader, program, anti-humanity agenda has a Jewish person at the forefront. Our show has documented hundreds of the same group, being involved in anti-humanity agendas, corruption, fraud, deceit and the repeated sacrifices of our children in heinous programs that are beyond evil. We can no longer keep ignoring the patterns of behaviors, because of some alleged book written hundreds of years ago, containing allegories at best and fraud at worst. It is costing many people their lives, untold suffering and a stifling of this planet's development.

Some people may choose to believe this is fantasy or another conspiracy, but if Professor of Electrical Engineering and Cellular Biology at Florida International University, Sakhrat Khizroev, is to be believed, his team had already developed magnetoelectric nanoparticles in 2018 capable of being injected into the bloodstream, like the flu shot or ingested and wirelessly guided to the brain. 2018 was one year before the conference called Event 201 attended by all the elites and the usual suspects like Gates, that laid out an emergency plan for a global pandemic called Cov-Sars. Then suddenly like magic it appeared. Then early in 2020 the US DOD launched project Jumpstart to build plants and manufacture of 100 million vaccine injection devices by the end of 2020, and 500M by 2021. THI exposed that in the very first of our Expose series, all about Covid in May 2020. In animal studies, the magnetoelectric nanoparticles could be wirelessly maneuvered to brain areas with single-neuron precision, and brought back out into the bloodstream once their mission was complete. That is like a symbiote of the Egyptian cult covered in the series Stargate. In a talk on the technology and the emerging field of techno biology Khizroev said, every day we are getting closer to the ultimate goal to use this technology on people and we hope within a couple of years we can do that. The accompanying graphic read, NANOPARTICLE – Unlimited Possibilities. I couldn't find details about Khizroev, but he does look distinctly Jewish.

Earlier in his career, when he was a straight-up electrical engineer and physicist, prior to his incarnation as a techno biologist, Khizroev had conducted research funded by the Air Force Office of Scientific Research, the Army Research Office, the Office of Naval Research and DARPA. For his part, Kurzweil is Director of Engineering and Principal Researcher + AI Visionary at Google, which, in turn, was seed-funded by the NSA and CIA and continues to collaborate with US intelligence today. US Military and Agencies involved in this again, a whole litany of anti-humanity programs yet people still send their sons and daughters there, complete lunacy.

Consistent with Kurzweil's Singularity, by 2015 NASA Langley's Dennis Bushnell was describing the possibility of uploading the brain into a machine, which would have god-like knowledge and would be connected to the emerging global sensor grid and global mind. That is the off world technology used for thousands of years and how these fake gods keep living over thousands of years as well. When their vessel is damaged or failing, they take another vessel and delete the consciousness of the host, then upload the consciousness of the fake god/person and into the new vessel. A global sensor grid and mind? A hive mind anyone? Where everyone thinks alike, does as it is told and always follows orders like a robot? Bushnell goes

on to cite Hans Moravec's idea of morphing into our brain children and becoming human contaminated machines. So, not only are machines deified ("god-like"), but human beings are treated as contaminants, a profoundly anti-humanist vision that is starkly at odds with the transhumanist mantra of bettering humanity. Anything they say is for our benefit, health, safety and security is a 100% lie and a program against us. They have never shown anything but contempt for humanity.

Back to the Future of 2020:

While such developments may have seemed too far from reality in 2001 plus 2011 and 2015, for most commentators to entertain, in 2020 NASA Langley's 2001 presentation gained new salience as key prognostications began making their way into real life. In 2020, social disruption, which was slated by NASA Langley to replace the farmlands of the Agricultural Age and the raw materials of the Industrial Age, descended right on time for a 2020 commencement to a new Bio/NANO era, as listed on slide 12 of the NASA document.

The social disruption of 2020, moreover, powered, for the first time in history, mass rollout of injectable gene-based BioNano technology via BioNTech vaccines, underpinned legally and logistically by the Military-Industrial Complex, particularly the US DoD and the National Security Council (NSC).[64, 65, 66, 67, 68] In the process, rapid mass transition to the tele-everything described in the NASA Langley document (tele-medicine, tele-education, tele-commerce, tele-socialisation etc, slide 16) came into being, laying a practical social pathway to the Virtual Age, in which, the world and society will shift even more to tele-everything. But what does tele mean? Tele, before vowels properly tel-, word-forming element of Greek origin meaning far, far off, operating over distance, from Greek tele far off, afar, at or to a distance, related to teleos (genitive telos) end, goal, completion, result from PIE root \*kwel- (2) far in space or time. The key words to that is far off, at a distance, end goal and far in space and time. All of which sounds like an off world program to me, have you considered that possibility? If not, why?

At the same time, in the realms of public discourse, as life was imitating NASA Langley slides, the WEF's Klaus Schwab and Yuval Noah Harari began touting the arrival of Bio/NANO Era developments under the auspices of a Great Reset and the Fourth Industrial Revolution, both of which had been nurtured prior to 2020 and hastened by the Great Disruption that was Covid-19. When asked about the significance of Covid-19 to the Fourth Industrial Revolution, Klaus Schwab said that Covid-19 had accelerated the ongoing Industrial Revolution, such that the Fourth Industrial Revolution is now a reality.

Expanding upon that theme, on April 14, 2020, a mere month after the World Health Organization had declared Covid-19 a pandemic, Harari explained that, with the arrival of Covid-19, we were seeing a change in the nature of surveillance. Previously surveillance was mainly above the skin. Now it's going under the

skin. Governments want to know not just where we go or who we meet, above all they want to know what is happening under our skin.

Harari also told The Late Late Show early in The Pandemic™, on 16 April 2020: What's happening now, it's really a watershed in the history of surveillance. First of all, we see mass surveillance systems entering and being adopted in democratic countries, which previously resisted them. Secondly, we see the nature of surveillance changing from over the skin surveillance to under the skin surveillance.

By under the skin surveillance Harari explained to BBC Hard Talk in May 2020, that he meant not merely medical measurements such as temperature or heart rate. Under the skin surveillance, he stressed, would enable governments and corporations to monitor not just what we do, but what we think and feel, to the extent that the corporate state would know me better than I know myself. He added that he thought it was likely that people could look back in 100 years and identify the Coronavirus epidemic as the moment when a new regime of surveillance took over, especially surveillance under the skin. Which I think is maybe the most important development of the 21st century. Harari in case people didn't know is also Jewish. He speaks like a typical elite Jew, with no love, compassion or empathy and living beings that are not Jews are just mere commodities and play toys for these psychopaths. But what was Harari talking about? His remarks were made in early 2020, when social distancing, masks and lockdowns were the countermeasures du jour. What did those interventions, or the virus they purportedly addressed, have to do with surveillance under the skin?

It is hard to disagree with Harari that had Covid-19 or its countermeasures, somehow served as a vehicle for covert mass deployment of subcutaneous surveillance technology, that would indeed qualify as a defining, if ominous, 21st century development. But how could such a thing have occurred? Did Harari know something we didn't? About Covid perhaps? Or the masks? Or the PCR tests? Of course he did, as he was rolled out as a public expert on it almost immediately it all went public.

Social Engineers or Space Cadets?

It is certainly true that, of all US national security agencies, NASA's remit begs the most impossible feats of biology and science. Living without gravity and oxygen, or coping with sensory deprivation are obvious examples. With such interplanetary objectives in mind, it is perhaps understandable that the agency's interest in cyborgs dates back to the 1960s. Remember NASA was created by the SS people brought to America via Operation Paperclip, including their Jewish scientists who committed atrocities in the camps. In a document titled Engineering Man for Space: THE CYBORG STUDY, NASA's Office of Advanced Research and Technology received a report in 1963 on its CYBORG Program, whose aim was to obtain the maximum integration of man into a man-machine complex. Interestingly, this came only one year after the CIA's MKULTRA Subproject 119 (1962), which explored techniques of activation of the human organization by remote electronic means, but did not result in any device for doing so.

The rationale for NASA's CYBORG Program six decades ago was to increase the efficiency and longevity of the life process on board space flights. In other words, NASA's space program provided a rationale, or perhaps a pretext, for funding research into areas that would otherwise be deemed too outlandish/immoral to fund, i.e. cyborgs. Justifying incursions into otherwise unconscionable territory by appeals to a valued collective purpose, it should be noted, is a common psychological tool for sanitizing atrocity.

By 2021, NASA had taken its space rationale sufficiently far to establish an international, interagency collaboration involving the Biomedical Advanced Research and Development Authority (BARDA), the Defense Threat Reduction Agency (DTRA), the Department of Health and Human Services (HHS), the FDA, the CDC, the NIH, eight international space agencies, a few universities, and a not for profit group with Google's Eric Schmidt and billionaire transgender transhumanist activist Martine Rothblatt on its board of trustees. Awful lot of Covid related organizations in that list, it could be one of the Expose series shows. That collaboration exploited the Research and Development opportunities of an international space station hosting a microgravity laboratory, which was orbiting the Earth every 90 minutes. Which proves the International Space Station is not for scientific benefits for humans, only military based experiments and programs.

In a set of slides on the initiative, titled Bioengineering at NASA: Towards an understanding of life in space, a timeline depicting six decades of space biology research marked the time point "now" with two words: synthetic biology. That is the synthetic beings we speak about, they may look like us, but they are not us, just soulless entities. Earlier, in 2011, a report prepared jointly by NASA Langley and a private government contractor summarized NASA's R&D synergy with external bodies, explicating its intended applications for synthetic biology. Those applications included interactions with electronics such as a synthetic bio-robot, which the report described as an autonomous robot resulting from the fusion of synthetic biology, electronics and cybernetics. This technology builds on the emerging field of synthetic biology by using the principles of biomimicry to develop a micro-scale cyborg.

Additionally, the report listed seamless human-computer interaction involving a Brain Machine Interface (BMI): also known as brain-computer or neural interface. Earlier they used twins for such practices that killed many of them, in the vain attempt to try to get them to fly downed spacecraft. Such an interface, the document explained, monitors the user's neurons and interprets his or her signals. This provides hands-free control of machinery and software and access to information, which could be a very useful technology in space environments. This is the living metal they most recently announced as a breakthrough, they lied they have had it for years, courtesy of back engineering crashed UFO's. This is what the nano-bots are for. Thus, since its first Cyborg Program report, NASA's rationale for cyborg technologies appears to have experienced mission creep, from astronauts' longevity in 1963 to convenience in 2011.

The 2011 report then described a simulated reality that would be indistinguishable from real experiences and so completely immersive, that the user would be unable to tell the two experiences apart. In essence they have managed to get the people already to believe in an illusion world, with facts that make no sense and are not based in reality. That was the subtle descent tactic. The technologies that could achieve this state would work directly on the brain itself, blocking real sensory input and replacing it with simulated input on the level of individual neurons. A moral line was thereby crossed. Hypothetical space scenarios, probably useful to no one, had provided the justification for the development of real-world technologies that could be used to hijack individuals' perception of reality. Which is the descent into 2D.

Next on NASA's technological agenda was Super Humans. NASA's super humans are based on: Physical Interfaces including physical and neural interfaces that augment human capabilities, such as exo-skeletons and infrared vision. Said neural infrared vision interfaces hard-wire visual sensing capabilities directly into the nervous system. The ability to see in different parts of the spectrum could be valuable for space operations.

And while this may represent just one small step for a cyborg astronaut, it is a giant step for human kind. It betrays a vision of homo superior whereby the super human is not the transcendent creative genius of academic transhumanists' tomes, but one whose perceptions of reality are externally defined and managed for them, in line with their manufacturers' requirements.

In short, with space exploration serving as the overarching rationale, it might make sense that NASA is simply seeking to create what Dennis Bushnell has called extremophiles for space, or cyborgs designed to thrive in extreme environments. However, Bushnell has proposed extremophiles not merely for space. He has also advanced them as a response to climate change. In his 2011 talk to the Blue Tech Water Innovation Forum Bushnell mooted modifying humans to take the heat. Why would he say humans? Does that suggest they are different from humans? He said: We have ongoing studies of extremophiles, plus the ongoing revolution in genomics and synthetic biology, that proffers the very real possibility of designer life forms, including humanoids, capable of thriving in whatever mess we make of the planet. What mess are they, not us, going to make of the planet?

That is, the intended end-use of extremophiles appears to be closer to home than outer space. Which is consistent with Bushnell's 2001 presentation to national security industry partners, in which cyborg technology was predicted to underpin new Ages for humanity. New Age? Is another program developed in the 1880's just after the Draco "stepped down" and left their largely Jewish minions in charge. New Ages, moreover, that were cast not primarily in terms of space flight or even climate change, but more standard national security fare, such as combat, surveillance and war. Including PSYWAR, along with new forms of attack encompassing beam weaponry (slides 45 and 103) and aerosolized mechanical micro-dust that bores into its victims' lungs (slide 43). Funny enough, smoking prevents lung cancer, Covid infections, all viruses,

does it prevent this micro-dust as well? Not to forget the surreptitious nano tagging along with microwave interrogation of everything and everyone (slides 41 and 88).

Which only begs more questions: Even if creating extremophiles for space were the true purpose of NASA's cyborg programs, why is NASA predicting new Ages of humanity and BioNano warfare? Why is it heralding the surreptitious nano tagging of everything and everyone? With microwave interrogation? For identification and status info? Whose info? What status? Why?

To answer these and other questions, in Part 2, drawing chiefly on officially authenticated and formally distributed military-intelligence primary source documents, we explore the evidence of designs plotted out for transhumanism in military-intelligence "futures" materials, which relate to the strategic vision of the national security world beyond NASA, for both the military and the civilian sector.

## PART 2:

### Abstract:

The Transhumanist campaign against humanity, we have outlined in Part 1, is part and parcel of a sophisticated long-game strategy waged against bodies and psyches. With the manipulation of our primal fears and altruistic impulses, the prosecution of this technological onslaught against humanity is camouflaged by linguistic shell games based on sanitizing, eulogizing and euphemistic language; justification through appeal to valued collective activities such as space exploration; and by claimed threats that humanity is itself the scourge, including through its propensity for unwanted love, which is recast as an affliction needing treatment with biochips and neuroceuticals.

That is why it is said, love is the answer, but to attain that you need to be in and of a higher vibration. The lower vibration that most people reside in, cannot experience love, only the illusion of it. Here is a reminder from a June 2022 show of the traits. Low vibration traits are Anger, hate, fear, sadness, worry, confusion, chaos, apathy, pain, suffering, blame, shame, guilt, and the two key ones to overcome, closed mind and the far more damaging, closed heart. Anger and hate are projections, Fear leads to sadness and worry for the future, fear is a future word as it hasn't happened. But it can happen as you have not addressed your own ability to change that future. Confusion, chaos and apathy are something they created but you bought into, blame, shame and guilt are your own failure to address your shadow and inner work, closed minds are the cancer of society, closed hearts are the blockages at the solar plexus, and why so many go with gut instincts and not the heart. Higher vibrations are joy, happiness and kindness, compassion, clarity, wonder, reverence, calm, curiosity, with 2 key vibrations of open mind and open heart. Joy and happiness are of your own making, never let anyone else decide your mood for you, kindness and compassion remember costs nothing materialistic, only your loving energy. Clarity comes with understanding, wonder is your manifest abilities,

reverence is respect, like saying treat others how you would like to be treated in return, calmness ah the calmness, 45-55 anyone? Love is something these clowns cannot attain, they are just cold hearted and in some cases soulless beings created in a laboratory. The elites children all undergo tortuous training to beat out any love, compassion or empathy, just like those who run Israel and all their think tanks, agencies, military and control based organizations like WEF, UN, Bilderbergers, WHO, CDC, Atlantic Council and many others.

In this perverse “New Normal”, technocratic regimes of dispossession headed by transnational economic interests and, we argue, the military-intelligence complex, are presented as self-evident and morally justified. Social order, civil rights and human sovereignty are reconceptualized, repackaged, and reframed in public discourse as surveillance under the skin.

Part 2 broadens scope beyond NASA and its purportedly space-oriented transhumanist agenda, by offering analysis of transhumanist forecasting and planning in an array of military-intelligence strategic vision or ‘futures’ documents, which are focused both on military personnel and civilian populations. We reveal that this evidence not only casts military personnel as fodder for transhumanist experimentation, but foresees societies and leadership agendas stratified along transhumanist lines. The trail of documentation ultimately leads to an intersection with military-intelligence scenario planning for a pandemic-ravaged dystopian global landscape in the year 2020, with real and present implications for impending global governance under the World Health Organization, with ratification of amendments to International Health Regulations and a new Pandemic Preparedness treaty signed in May 2024.

#### Introduction:

Too often do we marvel at the power of the institutions we have constructed over time, and too often do we take for granted that ministers of state power have a genuine interest in attending to the needs of the citizenry, who give consent to their rule. But how, in these times of systematic societal destruction, can we understand the ways in which a “New Normal” is being built before our eyes in the biological systems that comprise families, communities, and nations? How is the great transformation unfolding in real-time? Can the material evidence of fundamental change be discerned through the obscurity of official planning, policies and papers already published? The point is when will the people pay attention to this horror show being planned for them?

#### A Brave New Millennium: Nanotechnology, Policy, and the Building Blocks of Life:

In September 2000, almost a year before NASA Langley’s August 2001 ‘futures’ presentation to the National Defense Industrial Association (NDIA) described in Part 1, another ‘futures’ workshop took place a short drive along the Potomac River from Langley, at the National Science Foundation (NSF) headquarters in Alexandria Virginia. The workshop was titled Societal Implications of Nanoscience and Nanotechnology. It

was organized by the National Science and Technology Council (NSTC), a cabinet-level council of advisers to the President, which provides the principal means for the U.S. President to coordinate science, space and technology policies across the Federal Government. All of which is nonsense, these people barely pay lip service to the Government people, and the government people are too leveraged to take it on. Also wherever you see the word National, it is never a good foundation or organization. Perhaps the key is in the word itself, nation meant race, not a country and al means god. A race of gods is the national meaning, but which race? As it is clearly not ours. Yet how many people will entertain the fact of not only are we not alone, but we have them controlling us in plain sight.

In hindsight, one can see how the little-known September 2000 NSTC workshop now stands on the science and technology policy landscape, as an unassuming launchpad for what NASA Langley would term, in the following year, the BioNano Age. It was held two months after the US Government's National Nanotechnology Initiative (NNI) was announced in July 2000, whose aim was to accelerate progress in nanotechnology research, and was sponsored by the same Federal NSTC body that coordinated the National Nanotechnology Initiative. Of course they are all interlinked and connected, sometimes under the radar and many times right in your face. Shortly prior to the 2000 NSTC workshop, according to the workshop summary, a White House letter from the Office of Science and Technology Policy and Office of Management and Budget sent in the fall of 2000 to all Federal agencies, has placed nanotechnology at the top of the list of emerging fields of research and development in the United States.

In tandem with the nano-technological movement in the White House, the 2000 NSTC workshop spawned a modestly-worded 280-page report in 2001, which advised that a revolution is occurring in science and technology, based on the recently developed ability to measure, manipulate and organize matter on the nanoscale from 1 to 100 billionths of a meter. The report predicted that, over the next 10 to 20 years [2010-2020], nanotechnology will fundamentally transform science, technology and society. It added, there is little doubt that the broader implications of this nanoscience and nanotechnology revolution for society at large will be profound.

The status of such nanotechnology policies is significant to transhumanism's trajectory, in that nano-technological materials and tools are critical to the transhumanist project of re-engineering biological life. According to a 2010 report from the Air War College titled Nanotechnology: Threats and Deterrent Opportunities by 2035, the ability to work in nanoscale is leading to unprecedented understanding and control over the basic building blocks of all natural and man-made things. It goes without saying, that one could not get more elemental than controlling the basic building blocks of all natural and man-made things. Elemental or El is mental? What they are describing is, they become our god. Nanotechnology, the report explains, is about much more than dealing with the very small. It quotes Mihail C. Roco, Senior Advisor for Science and Engineering at the NSF, as saying that nanotechnology represents the convergence of science and engineering

where the fundamental principles of life can be found. What a deluded comment that is, machines and technology are not life!

In an applied sense, according to the 2001 Roco and Bainbridge NTSC workshop report: The nanoscale is not just another step toward miniaturization, but a qualitatively new scale; among the envisioned breakthroughs are human organ restoration using engineered tissue, designer materials created from directed assembly of atoms and molecules, as well as emergence of entirely new phenomena in chemistry and physics. Ah the classic line is we are doing it for your health benefits. But these are the same psychopaths from the medical world, whose whole mantra is to make people sick to make shekels, not to cure us of ailments. The greatest joke on Earth is their propensity to say, it is for your benefit, health, security or safety, because that is the worst joke and lie ever told. The silver lining from Covid revealed that last line to be true.

Those entirely new phenomena, The Air Force Research Laboratory explains in Nanoscience Technologies: Applications, Transitions and Innovations, arise because nano-sized materials are smaller than the scales at which conventional physics apply, and larger than those where atomic physics dominate. This intermediate state between conventional and atomic physics results in oddities such as forcing electrons into unique energy states, which in turn promote features including altered magnetic properties, improved superconductivity and exceptional strength. This all leads to more destructive weaponry in smaller less cumbersome packages, that is what they are telling us.

Among the potential applications of such nanotechnological oddities offered in the NTSC report are wired humans. Again notice they use the term humans, this has increased this century, before we were all just people, but now designated as humans. Why would they do that? The only logical conclusion is, there is another species or race that are not human. Do you truly understand what they are saying to us? Once you come to the same conclusion, then you can really understand why they would do this to us. The report foresees a day when, with the help of nanoscience, nano scanners will project imagery directly onto the fovea, a small depression in the neurosensory retina where visual acuity is sharpest, while microphone implants in the throat, and implants in the inner ear, could be coupled with implantable transmitting and receiving devices. Should such developments come to pass, then a human will be wired fully, not only internally but also externally to the vast network outside of the body. Wow, the sheer arrogance of these beings is extraordinary. Do these beings apply Cosmic Law when offering this “service”? Why would humans want to be wired for Source sakes? But then you have retarded people starting in Sweden having implants in their hands so they don’t have to open a door in the office, in the name of security. We humans have our own wiring created by Source, we don’t need their inferior wiring created by technology.

In its capacity advising the US President, to facilitate the advancement of wired humans and other innovations, the NTSC report offers recommendations for social scientists and policymakers to help us to take advantage of the new technology sooner, better and with greater confidence. Who made the US President

god? Will this technology go to a vote on whether the people want this technology? No, it will be mandated and other forms of coercion and threats, which is not true consent. As any consent obtained by coercion or threat is not consent at all, but a fraud from the beginning. What ensued from this point forth is perhaps among the most significant, and the most under-reported, series of developments in national security affairs. National Security, National is a clown based program wherever that word is used and security is for them, not us.

The following year a second workshop was held, titled, Nano Bio Info Cogno: Converging Technologies for Improving Human Performance. Improving human performance? Sounds great, right? Well if they were all about improving human performance, please explain the retard level of education they push on us. How is that improving human performance? It's not, because it is not designed to. So forget their nonsense of improving anything, these scientists have not advanced in 500 years, they have no morals at all and exhibit psychopathic tendencies every time they open their mouths or come up with a plan. The 2001 workshop spawned a second report, edited by the same authors as the previous year's NTSC workshop summary, Mihail C. Roco and William S. Bainbridge of the NSF. The second report, published in 2002, ran to 424 pages and launched what is now known as the NBIC initiative, an influential, international interdisciplinary convergence of activity across Nanoscience, Biotechnology, Information technology and Cognitive science / neuroscience (NBIC) domains. An introductory graphic to the report heralds the nascent NBIC convergence as changing the societal 'fabric' towards a new structure. The seemingly innocuous description of 'change' to the structural 'fabric' of society may have passed to readers, at the time, as unworthy of deeper contemplation, but digging into the details of the international interdisciplinary convergence of nano-everything yields surprising results about what change would actually entail.

Although not obvious in the NBIC report itself, a later NATO document made clear that the NBIC initiative had come about with DoD backing. Do you really still think we should be worshipping and honoring the US Military, Americans? Right through this whole series of From his story to our story now in its 38<sup>th</sup> episode, reveals a plethora of examples of insidious behavior by the US military against we the people, none more so than against Americans themselves. Worshipping the US military is rampant Stockholm Syndrome on an unprecedented scale, it has to stop to end the problem. The 2021 NATO report reads, NBIC is a scientific project bringing together four previously distinct domains: nanotechnology (nanorobot technology, nano-sensors, nanostructures, energy, etc.), biotechnology (bio-genomic technology, bio-engineering, neuropharmacology, etc.), information technology (computer science, microelectronics, etc.) and cognitive technology (cognitive science and neuropsychology). Neuropsychology and neuropharmacology are both involving interfering with the head or mind, which means they can control it. The project was formalized with the encouragement of the US Department of Defense (DoD) in 2002 and subsequently taken up by major international institutions and a number of nations, to bring together future technologies.

Indeed, concurrently with the NBIC project, just as the White House had entered the 21st century with a focus on nanotechnology and a new National Nanotechnology Initiative, the DoD entered with a compatible

Defense Science and Technology Strategy 2000, published in May of 2000. The Defense science and technology strategy declares that in order to provide for national security in the 21st century, the DoD would need to be building our portfolio of technology investments, leveraging the technology explosion, and enabling the Revolution in Military Affairs. The cold and calculated way they describe this invasion of humans becomes indicative, our portfolio? Sounds like a shekel person. Technologies of interest to the DoD are listed as including nanoscience, micro- and nano-robots, molecular engineering, augmented reality, nanoscale sensors and biosensors with smart sensor webs, all together enabling the combination of biology with information technology, electronics, optoelectronics, sensors and actuators. In other words, the same BioNano technologies underpinning NASA Langley's BioNANO Age, slated to commence in 2020, as discussed in Part 1. The subsequent DoD-backed NBIC initiative of 2002 cites the 2000 DoD Science and Technology Strategy report, offering embedded bionic chips in soldiers, as an example of the revolutionary technologies emanating from the national security realm. Except they have been inserting animal and mammal genes in certain soldiers before this 2002 report, into what is now known as the super soldiers. All of the super soldiers underwent MK Ultra prior to their inclusion into these programs.

Simply put, the DoD, NTSC and NASA Langley in 2000-2001, and NATO in 2021 along with a cornucopia of military-intelligence projects and documents in between, have been singing from the same transhumanist DoD BioNano hymn sheet since at least the turn of the century.

The 2021 NATO report continues: The object of NBIC is to encourage the development of tools and adapt or improve humans, through an anthropotechnical approach to develop a hybridized human-system. A hybrid human? is in part chimeric and also brings in the crashed UFO in Aztec New Mexico, that was far more of interest than the Roswell crash. The EBE (extraterrestrial biological entity) spoke of bringing hybrids to Earth, it was never clarified for what purpose. Neither was it clarified what happened to them. Where are those hybrids now? Are they tracked if still here? Who integrated them into society? What is their role here? All questions the public needs answers to. For those new I did a 3 part series on the Aztec crash based upon a fully transcribed Majestic 12 document called The Events that changed the world, available in the archive section on THI-show.com.

Today, this project has led to the partial convergence of domains, mostly through pairing information technology and health nanotechnologies, new chemical cognition enhancers, embedded electronics, etc. Ultimately, it will lead to an augmented human operator (or even a hybrid one), injected with amplifying substances or nanotechnologies. That is, it will lead to transhumans. With the help of hypodermic needles. By way of illustration, the NATO document notes, a number of enhanced soldier projects are already underway. It was underway before they announced it, nothing is future with their documentation, it is all in the past.

ENDING PIECE:

A fairly sobering piece and a harsh dose of reality and that's just Part 1. Too often humanity has focused upon the wrong things that are more trivial in nature and ignored the major things that affect their lives. This is not just going to create mandates, lockdowns and social distancing, although most went along with that program as well, this time they wish to change us and this planet. The great climate change program in the terms is a change of climate for the whole planet of a mental or moral atmosphere as you will find out. As Climate change is nothing to do with the weather or man's influence or not on the planet, and everything to do with a change of climate, as climate has more than one meaning.

Climate late 14c., horizontal zone of the earth's surface measured by lines parallel to the equator. Change of temperature gradually came to be considered more important, and by late 14c. the word was being used in the sense of a distinct region of the earth's surface considered with respect to weather. The sense shift to combined results of weather associated with a region, characteristic condition of a country or region with reference to the variation of heat, cold, rainfall, wind, etc., is attested by c. 1600. Figuratively, of mental or moral atmosphere, from 1660s. And in 1983, in the modern human-caused global warming sense. Which tells you how far back they plan, 1983 was 41 years ago. This is what we are dealing with, long term plans by these elites that can even have a duration of being before you were born. When one understands that a person's heart is actually not only the center of a person's psyche but also a person's mind and rational thought, it exposes much of modern-day computer science to be just as fraudulent as the field of psychology because it is built on false premises. The meaning of the word psyche is soul.

And yet, there is one analogy in computer science that compares computers to humans that is mostly true, and that is comparing the microprocessor chip to the human brain. Which means the brain like the computer can be controlled via commands and data input, the heart cannot be controlled. A computer microprocessor chip does not generally store much information, and it is not the origin of information data. It receives information (data), and then processes that information based on written language, or computer code. Since the brain is not the origin of man's non-physical or meta-physical life, it works in much the same way through the body's neurological system. Like a microprocessor, it regulates the human nervous system, passing along information. But in the human body, that information originates from the heart, where the mind and rational thought is located, and the words that come out of our mouth also originate from our heart. The same is true of a computer, which can also be made to resemble a human being and is generally called a robot. A robot computer does not create data, it only processes it. The data always originates from humans. In the early days when the first PCs were made and sold to the public, the most common data input device was a keyboard, used by a human being to input data. Then when graphical interfaces developed, another input device was added, the mouse, also used by human beings to input data. Keyboards and computer mice do not create data. They just pass it along from the humans who are using them. Computers have evolved today to be able to input much greater amounts of data, and can now include audio data, as well as visual data via cameras, etc. But all of that data is still put into the computer by human beings. Computers cannot create data; they can only process the data that is fed into it. Computers don't have hearts, like human beings do.

How is data put into your heart? It can be put in through your 5 senses via your eyes, ears, skin, nose, and mouth, and no computer can replicate these 5 senses as well as the human organs that receive them. But your 5 senses are not the only way you receive information (data). When a thought just pops into your heart, not your head, where does it come from? It comes from your psyche, which includes your soul and your spirit. These can be strong feelings and emotions, intuitions, and other non-physical means of obtaining information that can result from prayer, meditation, memories, etc. It is at this level, in our hearts, that Source speaks to us as well. Computers have none of this. They just have data that was supplied to them, and a processor.

Even the most advanced AI driven computers today work in the same way, just faster. ChatGPT, which is taking up all the headlines today, also works that way. It takes input from a user as a command to do something, and then rapidly scans through all the data online available to it, that human beings put on the Internet, and then processes it to display that data in a different form, such as a story, or an image, or even a video today. But what it does not do is create data, it just processes the data. This is how they developed religion in many ways, an AI sky god who sits on a cloud and passes judgement. What they were telling you is, those that created the computer and data input would harvest all your information and then profile you, which allows them to pass judgement upon you. That is why they called it a monitor,

Monitor: General sense of observe, keep under review is from 1944. In a Broadcasting sense of a device to continuously check on the technical quality of a transmission (1931) which led to special sense of a TV screen displaying the picture from a particular camera. In other words the monitor is the camera. Interestingly enough monitor is also a lizard, is that telling? Take into account also the keyboard, also key-punch, 1933, from keyboard (which operated it) + punch (v.), which is what it did to the cards inserted in it to record data. To record the data, which uses our energy again. mouse (v.) to hunt or catch mice, later they took the mickey out of us with Mickey Mouse. But Mickey Mouse has another meaning as an adjective meaning, small and worthless, petty or inconsequential. By using their machines they are hoping that we all become inconsequential, by means of organic death. Of which, they are asking us to expedite and deliver our own downfall, no karma for them. Perhaps the game Mousetrap has a whole new meaning now?

Computers and robots will never become smarter than humans, only faster processors of information. The speed at which computers can operate today truly is dangerous, but the danger is not in the actual computer itself, but the people who feed the data into the computer or the data they choose to exclude-like code, and their intentions behind it. Computers will never replace humans either, because they have no heart. Did they tell us publicly about this? Yes I warned of it 5 years ago with the movie called Extinction 2018, again just before the Covid program began. We ignored that warning, will we ignore this one as well? This warning is for those 55 and above to let the youth know this is unfolding, this will be their future. Those 55 and above will not likely face this program, but your children and grandchildren and beyond will. Unless we stop it, we are fighting for our very existence now and that is something all should come together on.
