

NEWS:

Brian Thompson, CEO of UnitedHealthcare, was shot in the chest and later pronounced dead, in what appears to be a targeted attack. UnitedHealthcare is the largest health care company by revenue in the US, based in Minnetonka, Minnesota. The parent company, UnitedHealth group, was founded in the 1970s. In 2023, the company's net earnings were \$22.3bn. UnitedHealthcare is the largest provider of Medicare health insurance plans in the country. It also manages health insurance for companies, as well as state-funded and federally funded Medicare. The company employs around 440,000 people worldwide. Is this a sign of the pitchforks time increasing?

Many Americans have this hero worship and Hollywoodesque version of the US Military, borne out of programming of a whole nation. Well this reality should pop that illusion bubble right here. This reality time and this is what they do to your sons and daughters within the war machine. Duncan Searcy joined the US Army in 2017. He became an Apache pilot for the Utah Army National Guard. In 2020, he and his unit were deployed to Afghanistan. Shortly after his return, American soldiers were required to take an experimental vaccine against corona. Searcy refused, after which they tried to force and bribe him. He was even threatened, he says in a video on X that has gone viral. In April 2022, he had to stay at the base and was not allowed to fly. Searcy also refused to be tested for corona, after which his salary was withheld. His wife divorced him, after which he moved to his parents' basement with his two small children. He was disowned by his unit. So much for fellow camaraderie.

After the vaccination requirement was abolished, Searcy could no longer be thrown out of the army because he had not taken experimental gene therapy. They then tried to fire him for mental problems. My individual situation within the army is only a small symptom of a major disease that affects us all. We are currently ruled by a Cabal or ruling class made up of greedy executives, woke generals, corrupt politicians and satanic celebrities, said Searcy. They create false flag operations to send your children to other countries, to die there for their own gain. They poison our food, water and medicine for the purpose of population control. They distract us with music, movies and fashion to rot our brains. They hate us and see us as cattle. Stupid, disgusting, easy to control, but useful, he adds. Taking back land? I'm done with it. Searcy calls on all Americans to stand up and take back the country, within the bounds of the law. There is no political party that is going to save you, since both sides are used by the elite class, he argues. The pilot expects terror attacks, mass shootings and economic collapse after Trump takes office, whom he wants to give a chance. Reality bites they say, it bites harder if the illusion lasts longer than it should have done.

Here is something we never expected to see in the main news, but these times are different. Many alt media over time including THI exposed these three companies for high level theft and corruption. Now it is in the MSM. As Texas and 10 other US States have pressed the radioactive Antitrust legal button and filed against BlackRock, Vanguard and State Street. The states claim the money managers bought up large stakes in coal companies and then colluded to promote ESG and DEI (diversity, equity and inclusion) goals that reduced coal output. The decreased supply of coal, in turn increased the cost of electricity to consumers. It was fundamentally anti-competitive behavior. These three companies together have \$26 Trillion dollars of assets under management. That's only one trillion smaller than the entire US GDP. In this case, some of the collusion hidden in clear view. The three money managers said they were trying to save the world and protect the people, and they joined groups like the GFANZ and Net Zero alliances like Climate Action 100+. But in the end, these three financial giants had collectively acquired close to 30% of most US Coal companies, and even though they claimed to have good intentions, the 11 State Attorney Generals argue that any extraneous claims of social benefits are irrelevant.

These three companies have profited immensely while customers have been denied access to a free and open market, and have paid higher electricity bills.

In a democracy, the people are supposed to decide the policies, not the Oligarchs.

For the past four years, America's coal producers have been responding not to the price signals of the free market, but to the commands of Larry Fink, BlackRock's Chairman and CEO, and his fellow asset managers.

As demand for the electricity Americans need to heat their homes and power their businesses has gone up, the supply of the coal used to generate that electricity has been artificially depressed, and the price has skyrocketed.

Defendants have reaped the rewards of higher returns, higher fees, and higher profits, while American consumers have paid the price in higher utility bills and higher costs.

Larry Fink the CEO of Blackrock, turned people's pension funds into his own leftist activist machine.

He told them he would maximize their gains, but instead he used their funds to promote his own profits and goals at their expense.

In early 20th century coal and energy people did exactly the same, cornering the market, stifling innovation and reaping vast profits by and largely to the Jewish EL-ites.

In early 21st century these same Jewish EL-ites have done exactly the same.

When will people realize what they are doing to us?

Here is another legal challenge to elite companies in the courts, times they are a changin'.

New York's Attorney General Letitia James hit two auto insurance companies, including Geico, with a fine topping \$11 million over customer data leaks.

In an announcement Monday, James and the New York State Department of Financial Services said some 120,000 New Yorkers had seen their data compromised by the Government Employees Insurance Company (GEICO) and The Travelers Indemnity Company (Travelers).

Interesting they used a different acronym for GEICO, Government Employees? It used to be General Electric.

Among the unsecured information was driver's license numbers, dates of birth and insurance quotes.

GEICO and Travelers offer drivers protection during times of emergencies, but these companies failed to protect consumers' personal information, Attorney General James said in a press release.

Data breaches can lead to serious fraud, and that is why it is important for all companies to take cybersecurity and data protection seriously.

Are they actual data breaches? or a clever hidden way to sell your data privately?

Another article highlighting the financial plight of Americans, whilst Biden, Trump, Harris and the corrupt media tell you everything is great with the economy and markets.

After the inflation of 2021 through 2023, as reported by GOBankingRates in January 2024, nearly half of Americans have less than \$500 in savings, and almost 60% of Americans have less than \$1000 saved up.

60% with less than a month's rent? whilst useless scripted liars like Rachel Maddow earn \$25M a year for talking shit.

Now combine that with the record credit card debt of many of those same people and there is no other conclusion to be made, but that a huge percentage of Americans are living on the margin.

They voted their dwindling pocket book over social justice pleas.

Prior to government response to Covid, wages had risen under Trump by 7.1%.

Adjusting for inflation, they fell under Biden.

Making it look like one was better than the other, they are not, it is all an illusion.

In the last decade, the spending by our state, local and federal governments has reached 35% according to Trading Economics.

It peaked over 40% during the government response to Covid.

Further, the costs of regulations imposed by our governments is well over \$2 trillion all combined.

If regulations were its own industry, it would trail only government and healthcare in size.

Most of that has been spent on Jewish based programs, like wokism, transgender, transhumanist, only black lives matter and inviting gangs into the country, it should be noted.

The societal costs of that spending, the taxes imposed to pay for it and those regulations, has been to limit yearly, average, economic growth to 2% or below.

We used to average 4% in the 1950s.

It has steadily declined since then as government has grown.

Two percent growth does not and cannot produce enough private sector jobs for a country the size of the United States plain and simple.

Recently, polling by Scott Rasmussen, in conjunction with The Committee to Unleash Prosperity, found that, among the elites defined as people having at least one post-graduate degree, earning at least \$150,000 annually, and living in high population density areas:

70% of the elites trust the government to do the right thing most of the time, more than twice the national average.

Among the politically active members of the elites, the figure rises to a stunning 89%.

Interesting they defined an elite as earning \$150K a year, most people will not see themselves as that, and therein lies the problem, a lack of

thinking.

In the Blueprint I stated no one should earn over \$150K a year, as it is unnecessary, some disagreed with that figure.

But that \$150K makes you an elite class member, is that something we should be aspiring too?

What it also proves is, as long as people have money, they just do not care about social injustice, therein lies the greater problem.

Many people joined the alt media around 2007-09 why? Because of the money crash and then they suddenly were interested in social justice, because they had been pushed the other side of the line.

It is mercenary behavior, no matter how much you earn or have in your savings, you should always fight for all people, not just when you are suffering or struggling as that is service to self only.

To end all people going the other side of the line, all people must stand up and fight back.

Because most people are only 1-2 paychecks away from becoming the next victim of being without.

MEDICAL SECTION:

More damaging vaccine exposure.

Recently there was a heartbreaking moment when Professor Ian Brighthope breaks down in tears in front of thousands of people in Perth in Australia.

Upon realizing that 60 million deadly vaccines have been administered to innocent Australians, now causing death and cancer.

<https://www.youtube.com/watch?v=GSX2NcgMJqA&t=136s>

The Global vaccine death rate is 50 million, and still counting.

World-renowned Professor of Medicine Jayanta Bhattacharya at Stanford University in his Great Barrington Declaration, signed by nearly 1 million medical experts from all around the globe.

He warned: As infectious disease epidemiologists and public health scientists, we have grave concerns about the damaging physical and mental health impacts of the prevailing Covid-19 policies.

Professor-Doctor Bhattacharya was brutally censored and viciously attacked for telling the truth.

But whom President Trump has chosen to head the US National Institutes of Health in order to repair the incalculable damage, caused by demonic Dr. Anthony Fauci.

A Wall Street Journal article titled: The Man Who Fought Fauci—And Won.

Is this a clever move by Trump? Or a sinister ploy to control the said doctor? I guess time will tell.

SOCIETY NEWS:

Here is another program being exposed again, the fake climate change and the misunderstood CO2 emissions.

A new study reveals that plants have been absorbing 31% more CO₂ than previously believed.

Yes, 31%, a glaring error that casts serious doubt on climate models, emissions scenarios, and policy prescriptions like Net Zero.

Net Zero is not about climate, it is the plan for our bank accounts.

After all Schwab said, you will own nothing and be happy remember.

For years, we were told that the science was settled, and that urgent action was needed to avoid catastrophic warming.

But this discovery suggests that our models have been dramatically underestimating nature's ability to manage CO₂.

This revelation not only upends the rationale behind aggressive policies, but also raises broader questions about the supposed certainty of climate science.

The Myth of Settled Science:

The phrase settled science has been the bedrock of climate advocacy for decades.

We've been told that if we don't make rapid, costly changes, we'd face imminent disaster.

Settled science means pre-programmed scripts to fit an agenda, as trust the science did in Covid.

In essence they are spellcasting us with their fake science.

Skeptics were treated as heretics, while the so-called consensus was portrayed as unquestionable.

Yet, it turns out we were 31% wrong about something as fundamental as plant CO₂ absorption.

This isn't a minor correction; it's a massive revision that undermines the credibility of models driving policy.

The Unraveling of Climate Models:

Climate models are the tools used to predict warming and guide policy.

They've been treated as scientific scripture, driving policies from emissions reductions to renewable energy mandates.

But with a key assumption proven wrong, the models' projections are called into question:

Overblown Emissions Impact: Climate models predicted rapid CO₂ buildup, assuming limited natural absorption.

This inflated the urgency of drastic emissions cuts.

Correcting for higher CO₂ absorption rates means that CO₂ accumulates in the atmosphere slower than models predicted, weakening the case for urgent, economy-wrenching measures.

It doesn't weaken the case, it shatters the illusion and lies.

Questionable Feedback Loops:

Many models rely on dramatic feedback loops, such as reduced plant CO₂ absorption at higher temperatures to justify emergency interventions. But this new data shows plants can handle more CO₂ than anticipated, making these feedback loops look less inevitable and more speculative.

Policy Implications: If the models guiding climate policy have been this far off, then the entire framework behind policies like Net Zero becomes shaky.

Policies driven by these models were never proven to be beneficial, but were only assumed to be so.

The discovery that plants are absorbing significantly more CO₂ undermines the supposed need for extreme measures.

It undermines the whole fake program delivered by agencies, militaries, rogue governments and elites.

A warning to all Jews, this is a set up and will get you all killed.

The Sanhedrin's pronouncement was succinct, so Israel365 News interviewed Josh Wander, who has received smicha or ordination from the Sanhedrin, to hear the details and implications of the rabbinic ruling.

Rabbinic or Satanic?

As a precursor, Wander explained that since the Torah was given at Mount Sinai, the Sanhedrin, composed of 71 elders, has been the ultimate judicial authority of the Jewish people.

Said who? Where is the proof of such claims? Which Mount Sinai, as there is two, the other is in Romania.

Comparable to the Supreme Court in secular matters, the Sanhedrin also had the ultimate authority on religious issues and met in the Temple while it stood in Jerusalem.

While many Jews do not recognize the authority of this current Sanhedrin, it is, in fact, expressly forbidden by Torah law for Jews to accept the authority of a system of law or a legal body that is not based in the Torah.

In other words it is Talmudic Law.

There have been previous attempts to reestablish the Sanhedrin.

The current nasi, or head of the Sanhedrin, is Rabbi Eliyahu Abergel, who served as the head of the Rabbinical Court in Beersheba and later as the head of the Rabbinical Court in Jerusalem.

Wander explained that the Sanhedrin makes this announcement every year, but this year, it is of special significance and is garnering more attention than in the past.

It has to do with what's happening worldwide, Wander explained, but isn't everything that is happening worldwide, Jewish related?

Jews worldwide are feeling pressure and are more open to the message.

Antisemitism is taking on dimensions and forms that have not been seen since before the Holocaust.

Taking on dimensions? Interesting terminology there.

Which holocaust, the Herod one or the Solomon one? both of which sacrificed children.

My concern is that with the Trump victory, many Jews that are in North America, the majority of Jews, perhaps in the world, are feeling safer, Wander said.

What an indictment of Trump that is, suggesting quite clearly that Trump operates by Israel first and America second.

They are a lot more comfortable with not coming to Israel, he said.

Wander cited a Jewish source titled the Meshech Chochma written by Rabbi Meir Simcha Ha-Kohen in Latvia in the early 20th century.

It was about a decade before Hitler took power.

The rabbi wrote that because the Jews are making their Berlin into their Jerusalem, God will have to bring a huge storm, which will wipe out Europe.

"Because they were making Berlin their Jerusalem" and you wonder why Germans didn't like them?

In comes the fear factor next.

The rabbi stated that God does not allow the Jews to feel too comfortable in the exile.

In exile? They have no home, they never did, so how can they be in exile?

We've seen in history over and over again that when the Jews get too comfortable in exile, God needs to shake things up in order to make them a little less comfortable.

This is what we are seeing worldwide right now, Wander said.

Nothing to do with god making them feel uncomfortable and everything to do with the atrocities they are committing and the world revolting against them.

Wander then provided the solution using fake religion and invisible gods, he said: God is making it uncomfortable for Jews so that they will come home to Israel.

Oh dear, so they can be conscripted? Sent out to get killed in the military or Mossad? Or is it a demographic issue and low Jewish numbers? Or do they just need more slaves to earn them more shekels?

This is a complete set up and a deliberate guilt and shame program against the Jewish people.

They know what they are doing, forget religiosity as that will get you killed also.
Forget Armageddon as well, that is another program designed for you to consent for them to kill you.
These people are manipulative psychopaths, do not fall for their games, plots and devious ploys.

EXPOSE:

[Text by Thomas Williams is in bold]

A little bit of a brain or mind ponder with this piece and it is another piece questioning consciousness and one wonders whether they are trying to convince us all, whether we are organic at all.

This of course then plays into the transhumanist agenda, with the adage of, we are not conscious, why would we be against bio-bot technology?

Annaka Harris, a science writer focusing on neuroscience and physics and the author of *Conscious: A Brief Guide to the Fundamental Mystery of the Mind* (2019), challenges us to reflect on two points:

- 1) In a system that we know has conscious experiences, the human brain, what evidence of consciousness can we detect from the outside?
- 2) Is consciousness essential to our behavior?

A reminder from the Santies, the people lost their consciousness and will, by command of alien enemies.

The editor notes, introducing an excerpt from the book:

But how sure can we be that plants aren't conscious? And what if what we take to be behavior indicating consciousness can be replicated with no conscious agent involved?

Annaka Harris invites us to consider the real possibility that our intuitions about consciousness might be mere illusions.

Harris begins with a shoutout to natural selection or survival of the fittest, noting:

Our intuitions have been shaped by natural selection to quickly provide life-saving information, and these evolved intuitions can still serve us in modern life.

But our guts can deceive us as well, and false intuitions can arise in any number of ways, especially in domains of understanding like science and philosophy that evolution could never have foreseen.

Therein lies part of the problem, why would we assess things from the gut? The gut is essentially the bodies landfill and filled with millions of bacteria to break the waste down.

Does that sound like something we should be listening to? Why at this stage of so-called evolution are more not questioning what they are actually saying?

True intuition comes from the heart, it will warn you, but will you listen or take heed?

An intuition is simply the powerful sense that something is true, without having an awareness or understanding of the reasons behind this feeling, it may or may not represent something true about the world.

That depends on your own trust of the self, too often we have ignored our intuition and paid a heavy price for it.

If it is a negative intuition, your cue then is to manifest a change in that negative outcome and something as simple as I do not consent may suffice.

The problem with the evolutionary approach to thinking is this:

If it's true that we can't trust the reasoning skills of our brains, which evolved merely in order to enable us to survive and reproduce (according to the theory), to arrive at a correct answer, we are in no position to evaluate Harris's own thesis as either sound or unconvincing.

Nor is she in a position to evaluate it herself.

I disagree, as that last statement is all very limiting, when we are capable of so much more, when we learn to get out of our own way and trust the self.

To do that you must shut down the brain aspect and go from the heart.

The Blink of an Eye:

She offers a look at locked-in syndrome, which is complete paralysis of the voluntary nervous system muscles except for those that control the eyes.

The most famous example is probably Jean-Dominique Bauby (1952-1997) whose 1997 memoir of his post-stroke life *The Diving Bell and the Butterfly*, was written with about two hundred thousand blinks.

He died two days after its publication in 1997, **I guess he blinked out!!**

There's also a film.

She also notes anesthesia awareness where, in rare cases, patients are aware of events and pain during surgery.

Yes, these rare events where people are conscious, but we don't know it.

But the patient knows it all too well sadly.

But how do we generally notice consciousness in other human beings? By their conscious interactions with us in situations where no other

explanation seems plausible.

In social situations, sudden unconsciousness in a human is likely to result in calls to 9-11.

Human consciousness remains mysterious but it is not ambiguous.

If Harris wants to introduce the idea that plants are conscious, efforts to denigrate the significance of human consciousness are simply not the best place to begin.

I agree, the point is all living organic beings are of consciousness, the soulless are not of consciousness, only a program resembling it.

On Firmer Ground:

She is on firmer ground when she observes that plants have been found in recent research to do many things that animals do.

She cites plant geneticist Daniel Chamovitz, whose book *What a Plant Knows: A Field Guide to the Senses* describes plant responses to touch, light, heat, etc.:

Plants can sense their environments through touch and can detect many aspects of their surroundings, including temperature, by other modes.

It's actually quite common for plants to react to touch: a vine will increase its rate and direction of growth when it senses an object nearby that it can wrap itself around; and the infamous Venus flytrap can distinguish between heavy rain or strong gusts of wind, which do not cause its blades to close, and the tentative incursions of a nutritious beetle or frog, which will make them snap shut in one-tenth of a second.

The electrical signals that stimulate nerve cells in plants are similar to those in animals, and the genes that enable the plant to determine light or darkness are the ones humans use too.

One might add to the list the fact that plants use glutamate to speed signal transmission, a technique also used by mammals.

Why are plants like humans, animals or mammals? because they have been them in the past in a different lifetime.

In other words, given the physics and chemistry of our universe, a finite number of efficient communications systems is available.

A variety of different life forms may be found using them.

Those life forms may share nothing beyond the need to adopt one of the available systems.

But plant communication can be quite complex as well, as Suzanne Simard, has shown:

She was studying the levels of carbon in two species of tree, a Douglas fir and paper birch when she discovered that the two species were engaged in a lively two-way conversation.

In the summer months, when the fir needs more carbon, the birch sent more carbon to the fir.

At other times when the fir was still growing but the birch needed more carbon because it was leafless, the fir sent more carbon to the birch, revealing that the two species were in fact interdependent.

Equally surprising were the results of further research led by Simard in the Canadian National Forest, showing that the Douglas fir mother trees, were able to distinguish between their own kin and a neighboring stranger's seedlings.

Simard found that the mother trees colonized their kin with bigger mycorrhizal networks, sending them more carbon below ground.

The mother trees also reduced their own root competition to make room for their kids, and, when injured or dying, sent messages through carbon and other defense signals to their kin seedlings, increasing the seedlings' resistance to local environmental stresses.

Likewise, by spreading toxins through underground fungal networks, plants are also able to ravage threatening species.

Because of the vast interconnections and functions of these mycorrhizal networks, they have been referred to as Earth's natural Internet.

Plants communicating, working together in a structured cohesive flow? The question is why can't humans do the same?

Evaluating Plant Interactions:

It's possible that plant interactions are as complex as those of social insects, but that does not, in itself, establish consciousness.

Ants, for example, might be best understood as thinking like computers, which implies efficacy but not consciousness.

Harris acknowledges that fact:

Still, we can easily imagine plants exhibiting the behaviors described above, without there being something it is like to be a plant, so complex behavior doesn't necessarily shed light on whether a system is conscious or not.

But then, in pursuit of plant consciousness, she cites artificial vs. human intelligence:

The problem is that both conscious and non-conscious states seem to be compatible with any behavior, even those associated with emotion, so the behavior itself doesn't necessarily signal the presence of consciousness.

Those with higher levels of consciousness are almost always those more in control of their emotions, I have found personally.

No, wait. With AI, we humans are insiders. We invented AI. We know how it's done.

No one is sure what human consciousness even is, but we are pretty sure what computers are and do.

Even at their best, chatbots, to take one example, are simply scarfing up and reprocessing what humans say on the Internet.

AI could only be conscious if somehow consciousness arises naturally from large scale computations.

We do not, at present, have a reason to believe that it does.

Why the doubt or hedging their bets saying that it is possible? It isn't possible, computers do not have thought or a connection to Source, so there is no consciousness involved.

Organic = consciousness, Inorganic = a code, a copy of a copy, that might appear like consciousness, but it's not and never will be.

The Philosopher's Zombie:

She then brings up the philosopher's zombie, the zombie that might act exactly like a close friend but has no consciousness:

Let's say your zombie friend witnesses a car accident, looks appropriately concerned, and takes out his phone to call for an ambulance.

Could he possibly be going through these motions without an experience of anxiety and concern, or a conscious thought process that leads him to make a call and describe what happened?

Or could this all take place even if he were a robot, without a felt experience prompting the behavior at all.

Again, ask yourself what, if anything, would constitute conclusive evidence of consciousness in another person?

It might be a valid scientific question, but science is not always relevant or understanding of life itself.

That is where in my opinion, science falls short.

And dare I say it, a robotic approach to life and understanding, when applied and emotions, plus unbiased observations reveals so much more.

Annaka discovered that the zombie thought experiment, is also capable of influencing our thinking beyond its intended function in the following way: Once we imagine human behavior around us existing without consciousness, that behavior begins to look more like many behaviors we see in the natural world, which we've always assumed were non-conscious, such as the obstacle-avoiding behavior of a starfish, which has no central nervous system.

In other words, when we trick ourselves into imagining a person who lacks consciousness, then we can begin to wonder if we're in fact tricking ourselves all the time when we deem other living systems, climbing ivy or stinging sea anemones to be without it. We have a deeply ingrained intuition, and therefore a strongly held belief, that systems that act like us are conscious, and those that don't are not.

In my opinion that is overcomplicating things, it is simple, organic living beings are conscious, inorganic creations are not conscious or exhibit consciousness.

Also once you have an understanding, trust and knowing of the self, why would be concerned of whether other living beings have consciousness or not?

What it reveals is, people's lack of knowledge.

But what the zombie thought experiment makes vivid to Annaka, is that the conclusion we draw from this intuition has no real foundation. Like a 3D image, it collapses the moment we take our glasses off.

Intuition in its base form is also consciousness, why? Because it is a thought pattern and those thoughts then create reality.

Again, wait. Every human beings knows about human consciousness in the first person.

But not one of us can ever be absolutely sure that another human being is conscious.

Our minds are, perhaps by design, accessible to others only by what we say and do.

That is a correct question or statement, but not in the way it is portrayed.

The reason being is, we assume all people are human beings, but unbiased non preconceived observations reveal a different story altogether.

Just because people look like human beings, does not mean they are.

Yes, the consciousness of others could be an illusion but then the whole universe around us could be an illusion, in theory.

We assume conscious human behavior in other human beings when they behave like conscious human beings.

That makes sense because the alternative, that you are the only conscious one, requires a much greater stretch of belief.

That thinking would be just pure ego and a non-understanding aspect to life.

As for climbing ivy or stinging sea anemones, we don't think they are conscious because nothing in their behavior prompts such an interpretation.

It's not a matter of intuition or prejudice; we are just not seeing evidence.

Which is fair enough from a scientific point of view, but you cannot see evidence of air, oxygen, frequencies, waves or the greatest false belief structure, the god and the characters of the bible.

There is no evidence any of them existed in the format written, yet people believe.

If only science people and scholars took an overview perspective of religion, instead of questioning consciousness, imagine the leaps humanity could make.

A Comparison with Chimpanzees:

Harris's argument here is similar to the one we encounter in claims that chimpanzees think like humans.

If they do, why don't we see anything like a human culture growing up among them, just occasional flashes of intelligent behavior?

The article said: Harris would do well to stick to the point that plant behavior is turning out to be as complex as animal behavior.

The question of consciousness is a separate one and there is no reason or need to assume that plants are conscious.

**Therein lies the problem and the lack of understanding of life with statements like that.
Plants are living things and so they are conscious, perhaps also with more intelligence than some scientists?**

You may also wish to read: Do ants think? Yes, they do, but they think like computers.

Computer programmers have adapted some ant problem-solving methods to software programs, but without the need for complex chemical scents.

Navigation expert Eric Cassell points out that algorithms have made the ant one of the most successful insects ever, both in numbers and complexity.

But their behavior is based upon the genetics of their much taller ancestors, who built many of the technology systems by copying the human species.

The old AI system was built by the spider race, to create a hive mind network.

Hence the copy of the copy wished to make man in their image, a hive-minded organism of compliance.

SCIENCE SECTION:

Scientists discovered a ridiculously simple way to remove almost 90% of microplastics from water: Just boil it.

There's a bit more to it than that, so don't go boiling your water thinking that alone will cure all plastic ails, but that's the key finding from a promising study published in Environmental Science & Technology Letters.

The study showed boiling and then, crucially, filtering water as a dual process got rid of up to nearly 90 percent of the tiny plastic particles, which the authors write can be found in 129 of 159 tap water samples from 14 countries worldwide.

Microplastics are pieces of plastic less than five millimeters long, the size of a pencil eraser and are often much smaller.

They come from larger plastics that degrade but don't break down and have been found high on Mount Everest, in the depths of the ocean, and in Antarctica.

The potential harm of microplastics in drinking water is supposedly unknown, though researchers have found that the pollutants can break the blood-brain barrier in mice and cause dementia-like behavior.

How is it they can study things related to mice and not humans?

One main concern to date has been the ubiquity of microplastics in shellfish consumed by humans.

The toxins have, however, caused allergic reactions and death in human cells in laboratory tests.

Researchers spiked tap water with polystyrene spheres and microplastics from a degraded polyethylene bag and polypropylene mask.

They boiled the water for five minutes and cooled it for 10 minutes before taking samples.

At high enough temperatures, calcium carbonate, which is commonly found in tap water, will become solid, effectively encapsulating or encrusting the plastic particles, and making them easy to remove through a simple filter, such as a coffee filter.

The tactic worked especially well with hard water, and results showed 95%, 81%, and 90% effectiveness in removing polystyrene, polyethylene and polypropylene.

The scientists didn't exactly trumpet their discovery, saying they wanted to stimulate more studies.

Yes as it depends upon what their paymasters allows them to reveal.

Still, they noted that it's easy to boil water, and the practice also kills microbes, parasites and viruses.

This wasn't the first effort to tackle the microplastics-in-water problem.

A sawdust-and-tannin filter removed 95.2-99.9% of microplastics, and plant extracts also provide effective treatment.

Another concept is a powder additive that can remove microplastics 1,000 times smaller than those detectable by wastewater treatment plants.

One observer was hopeful the study would mark a step toward a plastic-free future.

Are we going to be able to go and vacuum up every piece of plastic that's on the Earth already now? No, said Chris Reddy, a senior scientist at the Woods Hole Oceanographic Institution.

But I do think that we can make meaningful, broad-scale change in how plastic is potentially impacting our present.

Indeed and it can all be solved if the elites and their shekel based conglomerates moved out of the way.

MYSTERY SECTION:

Upon a deep pondering about life on and around Earth, plus mental plane traveling I came to a startling conclusion.

All based upon observation only, that there are no straight lines in nature.

Straight lines are inorganic life and living, designed to create traps and distort nature and the Universe itself.

In other words creating a fake reality.

This is why we have so many lines and defined patterns like triangles, squares, circles, hexagons, pentagrams, torus, mobius loops on this planet currently, they are all inorganic shapes and all are closed systems, nature does not create them shapes, it creates waves, spirals, snowflake patterns all of which have open ended patterns that allow for expansion and evolution, all of which are organic.

Just like the Blueprint flower of life.

I am not sure whether our science whizz Michael will agree to this, but this show is about opinions and sometimes we can disagree on things and that is ok.

My main concern now again based on observational mental travel and the traps set by the dark forces, brought me to a conclusion that the cube is a trap for all living beings.

One of the main science cubes is the tesseract, so I delved into that and came up with this description.

The tesseract is also called an 8-cell, C8, (regular) octachoron, or cubic prism. The figure 8 again like the mobius loop?

A tesseract is bounded by eight three-dimensional hyperplanes. It is bounded, which means trapped by 8.

The term derives from the Greek téssara meaning four and aktís meaning ray.

Ray? what type of ray? Laser ray? Laser is another straight line from visual perception, but actually it is curved.

Laser a beam of light, light emitted in a given direction from a luminous body, early 14c.

A beam of light from a luminous body? Brings up interesting connotations as that is describing the sun.

Rai, from Old French rai (nominative rais) ray of the sun, spoke of a wheel, which is the Rus swastika solar sign.

Gush or spurt from Latin radius, ray, spoke, staff, rod (see radius), not common before 17c.

Which is also very interesting, describing a ray and a radius as a staff, rod or bar that as mentioned earlier fires laser rays.

What that is describing is, the star maker and star breaker staff or rod that was in the hands of the Draco until 2014.

It is now safe and secured so it cannot be used again by warring races.

The rod or staff had sufficient power to create suns and also destroys suns as well, the Draco used it more for deleting whole solar systems.

OED; of the sun, usually in reference to heat, beam being preferred for light.

Ray is usually distinguished from beam, as indicating a smaller amount of light; in scientific use a beam is a collection of parallel rays.

In ordinary language ray is the word usually employed when the reference is to the heat rather than the light of the sun.

Science fiction's ray-gun is recorded by 1931 in Amazing Stories; an electric ray gun as an imaginary weapon is from 1924; death-ray gun from 1926 as a prop in a vaudeville act, which was a comedy farce with music.

But the Martians had a Heat-Ray weapon in War of the Worlds 1898.

When you use the thought pattern of, you cannot imagine something that doesn't already exist, then they knew of Martians and heat ray weapons in the 1800's.

But in the light of a cube is a trap, can you see where I am going with this? I asked both Kevin and Michael

Kevin's response was, in that exercise Circling the Square/ Squaring the Circle, the original figure is a circle perfectly inside a square or sphere perfectly inside a cube.

He suggested that Source is in the process of doing is upgrading to a New Format of matter, a new state of energy resonance represented by the square being perfectly inside the circle, the cube perfectly inside the sphere.

This is figure that will result, when you find a circumference that is the same length as the square, because the circle is inherently always shorter than a perimeter, because circles or spheres are more efficient and is the resonance upgrade Source wants.

To use spheres not cubes or more specifically, the energy resonance represented by spheres, and to phase out the energy resonance represented by cubes.

Part 6 discusses this project Source has embarked upon, it's all there in the Vedas.

I had chimed in again on this ponder, but then later then Robert Kinnigan chimed in and so we will go with what he said first.

He said: Something from Kevin's presentation where he spoke of a circle vs a square as efficiency of coverage.

Key term being efficiency thus energy flow.

That dot connected with the checkerboard pattern so prevalent in the dark ways.

Including the scrambling or checkerboarding of DNA.

Also a square fits fine in 2D but less so in 3D without distortion or screwball math.

Scaleable 2D pattern of squares within squares would be the maximum harvesting configuration and pull/dupe beings into belief of duality/2D.

Then everything fits in their world, but not our reality.

The pondering is, if the checkerboard pattern is introduced and overlaid to facilitate the least efficient energy flow of the natural energies?

Probably a plethora of other negative consequences not apparent immediately 2D.

Not sure if that touches on Solomon Seal or other DNA overlay manipulations of whatever nomenclature.

A scrambling would severely impair the DNA's ability to organize itself into its next evolutionary phase.

Trauma of scattering puzzle pieces and correct connections effectively.

The inefficiencies of energy are dams for harvesting and bleeding us of our life force energy whilst keeping us collectively in the harvestable state or condition.

Interesting stuff and perhaps a short piece I did this year adds to it?

What that means is, your view, understanding and perception of the world and everything, is formed by something or someone else.
All created by 2d images, I-mages, mirror magic and supposition.
A book, picture or movie are all 2D images that we have accepted as our reality in a supposed 3D world.
Assumption like logic, is not fact, it is the pre-disposed positions of other people.
Predispose means putting someone in a frame of mind, to be willing to do or accept something.
Pre means before, then dispose, so before they dispose of you, they get you in a frame of mind, to then be willing or accept your fate.
You do realize that? but will you use your real eyes and come to the same conclusion, is that they have been imposing upon us a 2D world and reality?
The ultimate in mind memes, the perfect form of subtle devolution, all done by accepting their views and opinions of your world.
In essence they have manufactured and overlaid the world of how they wish you to see it, what is worse is, we went along with it.
My ponderings went deeper as I have had a load of observations and experiences to suggest everything should be a sphere.
Never on my travels during the dream and daytime have I ever experienced any straight lines.
Except the cube, one of which was removed from the front of our sun back in 2013.

MSM and the science community announced around a decade ago that astronomer had detected a Dyson sphere around a sun, but it was not a sphere they presented, it was a cube.
Here is a description of a Dyson sphere, which is actually a square or cube overlaying the sphere, which is the sun.
A Dyson sphere is a hypothetical megastructure that encompasses a star and captures a large percentage of its power output.
The concept is a thought experiment that attempts to imagine how a spacefaring civilization would meet its energy requirements, once those requirements exceed what can be generated from the home planet's resources alone.
Because only a tiny fraction of a star's energy emissions reaches the surface of any orbiting planet, building structures encircling a star would enable a civilization to harvest far more energy.
The first modern imagining of such a structure was by Olaf Stapledon in his science fiction novel Star Maker.
A science fiction novel that just happened to be called star maker, just like what the Draco had, funny that.

The concept was later explored by the physicist Freeman Dyson in his 1960 paper, Search for Artificial Stellar Sources of Infrared Radiation.
Dyson speculated that such structures would be the logical consequence of the escalating energy needs of a technological civilization and would be a necessity for its long-term survival.
Kevin then mentioned it could be related to a dimension, but I disagreed with that, as a dimension is just a different frequency. But asked what generates the frequency within the cube?
Everything you see in "space" is a variant of a sphere, even Universes which is like a soap bubble.
So I knew it only applied to this dimension so I began to look at earthly based words, first up was the word geometry.
As this is heavily used in the science and astronomy circles.
Geo means Earth and Metry means art, process, or science of measuring.
Earth art, process or measuring.
Equals an Earth only process, so how does that translate to the cosmos/universe? The answer I found it doesn't.
Where in nature does it show straight lines? It doesn't.
So what are the straight lines? they are the pixels of the digit-al world.
A toroidal vortex gives the impression of straight lines, but the side walls of it are only drawn to show the path of the energy spiraling down or up.

As an example a laser beam projects a straight line, but on a non-visible viewpoint you know that line is a wave, and so is not a straight line.
What is created is a straight line, because they have programmed us with 2D thinking.
You cannot have a straight line, when everything is in wave form.
I was shown some of this in a download 2013, which I had to decode before gaining a greater understanding.
That was part of the presentation I did on the Common Sense zoom in January 2022 and also in Ireland 2023.
Think also of the heliocentric solar system model I presented, no straight lines only spiraling waves, that as it propels forward, it has a "space" between each spiraling arm.
Is this why their math is wrong?
Upon working some mathematical stuff out, I realized it was all hidden in plain sight by another term they use.
They use the square root or is it the root of the square, which becomes the cube?
Is the sphere root divided by the 9? Which would make sense.

The overview of this is, the cube is a 2d non Source based trap and harvest system, overlaying the organic creation.
All straight lines are created by man or beings, hence the US street grid pattern formation.
A grid connects everyone like a network, traps everyone inside and condenses the dark low vibrational cloud over populated cities and towns.

A grid is also the entrance to the sewer, is that symbolic?

Source, nor nature created straight lines, that is the 2D illusion game, only spheres and or spirals were created by Source which is organic and true to nature.

If you are thinking well a tree is a straight line so that disproves the theory, but the tree is a series of spirals and spheres or rings that gave it its shape.

Recently we mentioned the game of snooker that is played with a cue ball, but perhaps what it really means is, it is a cube all, a trap that cubes us all, in other words we were snookered.

In the light of these cubes now in the day of the Svarog, perhaps this song is appropriate.

Update from the web team on uploading images to the BE forum posts or albums, and their image size / quality when being saved from / downloaded from BE.

When bringing up the image which was previously uploaded to the BE forum, there are 2 options to save the image: 1) right click on the image and Save Image As, this saves a lower quality of the image, but 2) if using the Download option from the 3 dots, this downloads the original quality of the image.

Something I have to address regarding the group, is to why all of a sudden several members are all asking for clarification, when everyone has already had it?

It seems to be permeating through all the groups currently, is that suggestive of a lack of focus?

No clarity for the BP teams was one of the issues, but another issue arose that I have addressed multiple times, yet it never seems to sink in. The issue of Ucadia.

I have addressed this with Roger multiple times also and he is clear on the subject.

I hear there is many alarming issues surrounding contracts and bindings deeper within the Ucadia material, but that is not what THI endorsed.

We have used portions of Ucadia, not the whole script.

The relevant portion of Ucadia is in the Blueprint, all the rest has no current value to THI or the Blueprint.

It may well have or play in some future use, but not for the now.

There has been issues within the Blueprint which was touched upon lightly in the End of year review Part 2, but was not appropriate to go further into in that show, as it would have deflected the great work that had been done throughout the year.

But my observations over the year, where several indiscretions, poor planning, poor communications, of people not staying in the lane, people refusing to do the work they volunteered for and a general malaise around something that should have been important to everyone.

I have witnessed and felt the tensions, frustrations and discord within the groups, despite several attempts to try to diffuse it or re-focus people.

I have watched members struggle with the frustration of people playing games, people asking for clarity like we only started the Blueprint a few weeks ago, egos running amok, people hiding and members health affected due to all the stress and frustration.

I could not sit by and ignore all that and actions had to be taken.

A new system was set up recently to help the few who are involved, but even that was not applied properly.

As people came in straight away trying to change it, again not wanting to go with the structure and then people deciding to not post the memes, the Media team had worked so hard to create in a short space of time.

It is very disrespectful to the few people who did the work.

We had leaders who didn't lead or didn't turn up and yes that is not right, but where we not all members designated as leaders?

What it tells me is, people just want to do their own things and not work in a structure.

Not only that, but people do not want the Blueprint to succeed if it involves them A: having to do something or B: having to take personal responsibility for it.

But also I have had to witness certain members blocking contacts made to the group or myself, that was completely disrespectful to all who worked on the Blueprint.

But last week I also found out another email issue, as dozens and dozens applying to join the TPC and or communal gatherings were completely ignored.

At best that is incompetence, at worst it suggests the possibility that some members where deliberately blocking the group expanding or moving forward.

I often hear the cries and pleas of I have no life due to THI, or their own personal or group moans and complaints, I wonder how many stop and think of how I feel or felt watching some people act no better than the masses, when you have all been given the tools to be and act as better people?

The disappointment is that it was those close to me in the village, so much for gratitude, but it is what it is.

In general terms there doesn't seem to be enough push from the members to continue the Blueprint teams, the format and shows anymore, which is ok, as that is the will of the people.

But given the number of people stepping back, some removed for attempting to destroy the work and the groups, some unwilling to follow the

structure, plus people being more interested in the THI side of the show, there will be no more Blueprint shows following the last one on November 21st and Episode 35.

Is it fitting and or indicative in some way that it ended on an 8 show, signifying the loop and the old and more familiar way is better, of do nothing and wait for another savior program.

Some may find disappointment in that, some maybe angry, but they are part of the few who did the bulk of the work.

To them, this is not a reflection of your work, please take solace in that.

But given the importance of what we were doing, one wonders where the guardian aspect of it was? Guardian went to gordian, a knot of hampering, suppressing, avoiding, bickering, excuses and not doing.

The majority of our members based on the numbers chose not to engage in the Blueprint, which is indicative of a general malaise in society. With the decline of the groups, people choosing or ignoring the new format, people leaving or stepping back, the few doing were being put under unnecessary stress and duress, it was time to call it a day on the group nature of the Blueprint.

It was all too much in terms of drama, shenanigans, reluctance and it was effecting members wellbeing and also health.

Again how many stopped to think how I would feel watching all that unfold?

There will be no more organized meetings for media, research, activist groups, the BP Action meetings will be canceled, the be.forum will likely be repurposed.

This will give people their life back and no longer tied into several meetings and or workloads to manage and juggle.

The websites of the Law, Gardening group will remain as a testament of the work completed.

The youth website may have a new purpose next year, in one of several opportunities coming up in the new year.

The indexing and categories will continue in the structure put forward.

The media team will continue with the 4 cycle posting should they wish to do so, gardening and merchandise just as they were, the book team also.

The Canadian and European Blueprint teams carry on as you were also, as it is important they are delivered.

There are other stages of the Blueprint, but that depends on you all playing a part in promoting it further.

It is down to you all now, how the Blueprint continues or doesn't per se.

By that I mean, there will be no structure outside of the Assignment team, which will continue to push the Blueprint on all fronts.

You are free to do as little or as much as you wish now, promote it privately or not.

In life to succeed, thrive, develop, learn, love and be happy, all require a greater proportion of your energy to make those basic human traits possible.

Sadly too many will not put their energies into pursuing those goals and prefer to sit and wait for the savior and some new program to attach to, all of which decides your fate for you.

There is no triality aspect in that path or life choice and so ultimately the song, movie, play and stage all remain the same.

I will not be mourning its loss, I will as always be focusing on the future, a very different future based upon choices from the past.

We had a great journey with the Blueprint for 2.5 years and delivered something truly special.

Thanks to all who took part and to the few who wish to continue the Blueprint journey in a smaller format, lets ride the Blueprint train together in 2025.

I have a feeling things are about to get real interesting on many levels.

The assignment team will carry on the mystery way, the mystery path and maybe even the school, that some chose to reject it, as clearly it was not deemed important enough.

Again that is ok with me, as people exercised their free will choice and they chose accordingly.

Thanks for all those who put a great deal of effort into the Blueprint to get it where it is today.

It was a memorable experience for the most part and a useful experiment to see where everyone is at.

We go forward into 2025 with a renewed hope that certain things will unfold, the way it was all intended.

I said it would only be the few, and that is what has unfolded.

Well that wraps up another exciting year of THI shows, our final show this year and what an extraordinary year it has been.

Our next show will be End of year review Part 3 on January 7th, before that you will see me next on Sunday January 5th for the December Common Sense zoom, looking forward to that.

So I am left to wish you all a happy new year and hope your wishes for next year unfold as you wish.

As the 8 year closes and the 9 year is about to begin, with a renewed hope.

As for me personally, I'm excited for the next phase of life, love, journey and developments.

Life has always thrown hurdles or waves at me, I just rise and keep on skimming them in my own unique way.
